PERIODIC TABLE ORGANIZATION

Get lost in the periodic table! Represents a systematic arrangement of elements based on their chemical properties.

DIATOMIC MOLECULES

Many 2 or more atoms of the same element chemically combine. They are most prevalent as an element because they are the most stable form of the element. They are just molecules. These types of molecules are called diatomic molecules. They are usually represented as 2 atoms.

Understanding the structure of atoms helps explain how atoms combine and form the molecules they are able to react with other elements.
