Periodic Table Make Your Own:

Hands-On General Science Activities With Real-Life Applications Pam Walker, Elaine Wood, 2008-04-21 In this second edition of Hands On General Science Activities with Real Life Applications Pam Walker and Elaine Wood have completely revised and updated their must have resource for science teachers of grades 5-12. The book offers a dynamic collection of classroom ready lessons, projects and lab activities that encourage students to integrate basic science concepts and skills into everyday life.

The Kitchen Pantry Scientist: Chemistry for Kids Liz Lee Heinecke, 2020-05-05 Replicate a chemical reaction similar to one Marie Curie used to purify radioactive elements. Distill perfume using a method created in ancient Mesopotamia by a woman named Tapputi. Aspiring chemists will discover these and more amazing role models and memorable experiments in Chemistry for Kids. This engaging guide offers a series of snapshots of 25 scientists famous for their work with chemistry from ancient history through today. Each lab tells the story of a scientist along with some background about the importance of their work and a description of where it is still being used or reflected in today's world. A step by step illustrated experiment paired with each story offers kids a hands on opportunity for exploring concepts the scientists pursued or are working on today. Experiments range from very simple projects using materials you probably already have on hand to more complicated ones that may require a few inexpensive items you can purchase online. Just a few of the incredible people and scientific concepts you'll explore:

- Galen b 129 AD: Make soap from soap base, oil and citrus peels. Modern application: medical disinfectants.
- Joseph Priestly b 1733: Carbonate a beverage using CO₂ from yeast or baking soda and vinegar mixture. Modern application: soda fountains.
- Alessandra Volta b 1745: Make a battery using a series of lemons and use it to light a LED. Modern application: car battery.
- Tu Youyou b 1930: Extract compounds from plants. Modern application: pharmaceuticals and cosmetics.

People have been tinkering with chemistry for thousands of years. Whether out of curiosity or by necessity, Homo sapiens have long loved to play with fire, mixing and boiling concoctions to see what interesting, beautiful and useful amalgamations they could create. Early humans ground pigments to create durable paint for cave walls and over the next 70 thousand years or so, as civilizations took hold around the globe, people learned to make better medicines and discovered how to extract, mix and smelt metals for cooking vessels, weapons and jewelry. Early chemists distilled perfume, made soap and perfected natural inks and dyes. Modern chemistry was born around 250 years ago when measurement, mathematics and the scientific method were officially applied to experimentation. In 1896, after the first draft of the periodic table was published, scientists rushed to fill in the blanks. The elemental discoveries that followed gave scientists the tools to visualize the building blocks of matter for the first time in history and they proceeded to deconstruct the atom. Since then, discovery has accelerated at an unprecedented rate. At times, modern chemistry and its creations have caused heartbreaking, unthinkable harm, but more often than not, it makes our lives better. With this fascinating hands on exploration of the history of chemistry, inspire the next generation of great scientists.
