Twelve separate cohorts defined by date of initial program exposure were evaluated using a one group interrupted time series design Cross sectional time series analysis which combines ordinary least square regression techniques and time series analyses was used to evaluate program effectiveness After controlling for confounders and the effects of time the data indicated that membership in the DCMP was associated with increased costs and increased utilization over the two year study period The study points to the need for further research into the effectiveness of diabetes case management programs especially for participants of Medicare Advantage health plans
