, 1914 *Air Pollution Control Engineering* Noel de Nevers, 2010-05-07 Air pollution control can be approached from a number of different engineering disciplines: environmental, chemical, civil, and mechanical. To that end, Noel de Nevers has written an engaging overview of the subject. While based on the fundamentals of chemical engineering, the treatment is accessible to readers with only one year of college chemistry. In addition to discussions of individual air pollutants and the theory and practice of air pollution control devices, de Nevers devotes about half the book to topics that influence device selection and design, such as atmospheric models and U.S. air pollution law. The generous number of end-of-chapter problems are designed to develop more complex thinking about the concepts presented and integrate them with readers' personal experience, increasing the likelihood of deeper understanding. **Distillation and Absorption 2006** Eva Sørensen, 2006 This work contains the proceedings of the Distillation and Absorption conference, which happens every 5 years. This collection of 100 contributions spanning 23 countries showcases the newest and best distillation and absorption technologies, which cover a broad range of fundamental and applied aspects of the technology. To address these aspects, the contributions have been put into seven themes: modelling and simulation; steady-state dynamic and CFD; energy efficiency and sustainability; equipment design and operation; integrated hybrid and novel processes; process troubleshooting and handling; operational problems; control and operation; and basic data.
