Waldmann,2017-12-12 Causality is one of the core concepts in any attempt to make sense of the world and the explanations

people come up with shape their judgments emotions intentions and actions This renders causal cognition a core topic for the social as well as the cognitive sciences In the past however research has been split into diverging paradigms each pertaining to a distinct sub discipline and focusing on a specific domain thus creating a rather fragmented picture of causal cognition Furthermore most of this previous research paid only incidental attention to culture as a possibly constitutive factor leaving important questions unanswered Is causality always perceived in the same way Are causal explanations affected by the concepts to which people refer and or the language they use Is causal cognition domain specific and if so how does it differ from agency construal Is causal reasoning always based on the same cognitive mechanisms or does the cultural background of people shape how they process respective information and perhaps even their willingness to search for causal explanations in the first place By soliciting contributions that address questions like these this research topic aimed at assessing the extent to which causal cognition may vary across species cultures or individuals at various stages of their development and at integrating different perspectives across a broad range of disciplines Originating from the work of a research group funded by the Center for Interdisciplinary Research ZiF at Bielefeld University Germany the scope of this research topic was broadened by inviting additional contributions from researchers with expertise in different fields of causal cognition agency construal and or cultural impacts on cognition In order to fully exploit the potential of cognitive science we explicitly encouraged submissions from scholars from all its classic sub disciplines i e anthropology artificial intelligence linguistics neuroscience philosophy psychology as well as scholars from comparative psychology cognitive archeology economics and any other discipline interested in causal cognition We welcomed empirical findings as well as theoretical contributions with an emphasis on those factors that do or may constrain trigger or shape the way in which humans and other primates think about causal relationships and inform us about both the diversity and the universality of causal cognition **English**

**Mines and Minerals** ,1890 Melt Water Retention Processes in Snow and Firn on Ice Sheets and Glaciers: Observations and Modeling W. Tad Pfeffer,Jason E. Box,Robert S. Fausto,Horst Machguth,2018-11-08 Melt takes place where the surface of glaciers or ice sheets interacts with the atmosphere While the processes governing surface melt are fairly well understood the pathways of the meltwater from its origin to the moment it leaves a glacier system remain enigmatic It is not even guaranteed that meltwater leaves a glacier or ice sheet On Greenland for example only slightly more than 50% of the meltwater runs off The remainder mostly refreezes within the so called firn cover of the ice sheet This eBook contains 11 studies which tackle the challenge of understanding meltwater retention in snow and firn from various angles The studies focus both on mountain glaciers and on the Greenland ice sheet and address challenges such as measuring firn properties quantifying their influence on meltwater retention modelling firn processes and meltwater refreezing as well as unravelling the mechanisms within the recently discovered Greenland firn aquifers
