Physical Properties of Matter

Characteristics that help us better understand our world

When we see an apple like the one at the top of this page, we immediately start to notice things about it. We

characteristic of **matter**. We can observe the physical characteristics of matter in any **physical state** – solid, liquid, or gas. There are many different physical properties of matter – magnetism, relative density, solubility, physical state, volume, electrical conductivity, and thermal conductivity.

Magnetism

The magnetism of an object can be described by its attraction to a magnet. Magnetic objects are made of certain kinds of metal. Magnets create a magnetic field. If there is an object that is magnetic within that field, the object will move toward the magnet. The apple on the top of this page is not magnetic, while it may not be attracted to a magnet, the

solubility describes a
's ability to **dissolve**, or break,
matter parts in another substance. When a substance dissolves
drier, it creates a **solution**. Solutions are not only created when
such as sugar, dissolves into a liquid, like water. The air you

State and Volume

uids, and gases are all states of matter that can be observed
the **volume** of solids, liquids, or gases requires different
s. Volume is the amount of space an object takes up. When
find the volume of a liquid, you use a measuring tool like a

find the volume of the container it is in since gases tend to
out throughout their container. Finding the volume of a solid
