Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2014 *Women, Disability and Mental Distress* Julia L.T. Smith, 2016-02-17 Over recent decades an increasing amount of attention has been paid to identifying and meeting the individual support needs of mental health service users and people with physical impairments in the UK Evidence of this can be seen within the literature that considers mental health and physical impairment from a wide range of perspectives as well as the increased range of service provision for individuals within both categories However the support needs of individuals who fall into both categories have largely been overlooked by social care and health service providers practitioners and organisations for whom the main focus is either mental health or physical impairment The lack of attention that has been given in theory and in practice to the mental health support needs of disabled women who experience mental distress has resulted in an insufficient knowledge base of how to support disabled women who may require some form of mental health support For this group of women this has meant that their needs have arguably continued to be neglected and subsequently left unmet Writing from her position as both a social worker and a service user Julia Smith has written an innovative and important text which both discusses a neglected area of personal experience and makes an original contribution to knowledge with regard to both policy and practice Review of the Draft 2014 Science Mission Directorate Science Plan Committee on the Assessment of the NASA Science Mission Directorate 2014 Science Plan, Space Studies Board, Division on Engineering and Physical Sciences, National Research Council, 2013-12-16 NASA s Science Mission Directorate SMD is engaged in the final stages of a comprehensive agency wide effort to develop a new strategic plan at a time when its budget is under considerable stress SMD s Science Plan serves to provide more detail on its four traditional science disciplines astronomy and astrophysics solar and space physics also called heliophysics planetary science and Earth remote sensing and related activities than is possible in the agency wide Strategic Plan Review of the Draft 2014 Science Mission Directorate Science Plan comments on the responsiveness of SMD s Science Plan to the National Research Council s guidance on key science issues and opportunities in recent NRC decadal reports This study focuses on attention to interdisciplinary aspects and overall scientific balance identification and exposition of important opportunities for partnerships as well as education

and public outreach and integration of technology development with the science program The report provides detailed findings and recommendations relating to the draft Science Plan

Save Lives or Save the Rhetoric? David H. Goldenberg, 2021-01-28 Save Lives or Save the Rhetoric is for those who think for themselves and follow the logic and the evidence wherever it leads It offers an alternative to believing what others tell us through the media the pundits the politicians and all those partisans who benefit from their particular narratives Whether we know it or not we are inundated with rhetoric that is based on the numerous forms of flawed reasoning and fallacies which are discussed in this book The first step is to develop the skills needed to distinguish between rhetorical claims and evidence based claims This book provides a method to accomplish that David H Goldenberg presents and shows how to debug many currently relevant real world examples Innovative discussion questions provide the reader an opportunity to practice and be actively involved This book is not about taking positions but about learning how to analyze and assess them using logic evidence data analysis and economics not confirmation bias Hopefully the reader will resist the rhetoric with its reductionism and polarization by depoliticizing their approach to this book's intent and content The goal of the examples theory case studies economics statistics historical documents and data analysis offered in Save Lives or Save the Rhetoric is to provide citizens with an informed approach to examining and evaluating the issues the rhetoric and the evidence in order to ultimately make their own informed decisions The second part of the book delves into concepts and methods that any intelligent citizen may apply in order to make informed decisions about policy proposals The objective throughout is pedagogy not partisanship to help the reader better understand current events better identify the rhetoric in partisan debates and better evaluate public policy

Giuseppe Boccignone,Roberto

Cordeschi,2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science Enabling Technologies for Very Large-Scale Synaptic Electronics Themis

Prodromakis,Alexantrou Serb,2018-07-05 An important part of the colossal effort associated with the understanding of the brain involves using electronics hardware technology in order to reproduce biological behavior in silico The idea revolves around leveraging decades of experience in the electronics industry as well as new biological findings that are employed towards reproducing key behaviors of fundamental elements of the brain notably neurons and synapses at far greater speed scale products than any software only implementation can achieve for the given level of modelling detail So far the field of neuromorphic engineering has proven itself as a major source of innovation towards the silicon brain goal with the methods employed by its community largely focused on circuit design analogue digital and mixed signal and standard commercial Complementary Metal Oxide Silicon CMOS technology as the preferred tools of choice when trying to simulate or emulate biological behavior However alongside the circuit oriented sector of the community there exists another community developing new electronic technologies with the express aim of creating advanced devices beyond the capabilities of CMOS that can intrinsically simulate neuron or synapse like behavior A notable example concerns nanoelectronic devices responding to well defined input signals by suitably changing their internal state weight thereby exhibiting synapse like

plasticity This is in stark contrast to circuit oriented approaches where the synaptic weight variable has to be first stored typically as charge on a capacitor or digitally and then appropriately changed via complicated circuitry The shift of very much complexity from circuitry to devices could potentially be a major enabling factor for very large scale synaptic electronics particularly if the new devices can be operated at much lower power budgets than their corresponding traditional circuit replacements To bring this promise to fruition synergy between the well established practices of the circuit oriented approach and the vastness of possibilities opened by the advent of novel nanoelectronic devices with rich internal dynamics is absolutely essential and will create the opportunity for radical innovation in both fields The result of such synergy can be of potentially staggering impact to the progress of our efforts to both simulate the brain and ultimately understand it In this Research Topic we wish to provide an overview of what constitutes state of the art in terms of enabling technologies for very large scale synaptic electronics with particular stress on innovative nanoelectronic devices and circuit system design techniques that can facilitate the development of very large scale brain inspired electronic systems
