QUESTION 1

Various options are provided as possible answers to the following questions. Choose the correct answer and write **ONLY** the LETTER (A-D) next to the QUESTION NUMBER (1.1-1.7) on your folio paper. Example 1.8. D.

- 1.1 Which of the following pairs of compounds contains members of the same homologous series?
- A Ethanol and butane
 B Ethanol and propanoic acid
 C Ethanol and propanal
 D Ethanol and butanoic acid
- 1.2 In which of the following cases would the resultant force acting on an object be equal to 0N.

- A A constant number of different ions are involved.
 B Aqueous solution of a substance just dissolves in water and does not react.
 C An ionic substance forms a solid compound with water.
 D An ionic compound is made by neutralisation.
- 1.3 Which of the statements below best describes Weightlessness?
- A An object is free of weight and has no mass.
 B An object is free of weight and has no mass.
 C An object is free of weight and has no mass.
 D An object is free of weight and has no mass.
- 1.4 The inertia of an object...
- A is the same for all objects.
 B is the same for all objects.
 C is the same for all objects.
 D is the same for all objects.

- 1.5 An astronaut has a weight E_E on Earth. What distance, in terms of the radius of the Earth (r), will the astronaut be if his weight is a 1/4 of his weight (E_E) on the surface of the Earth?
- A r
 B $2r$
 C $4r$
 D $8r$

- 1.6 A box is pushed forward with a force of 100N but does not move. A possible reason for this is that:
- A The box is too heavy.
 B The box is too light.
 C The box is too heavy.
 D The box is too light.
- 1.7 A box is pushed forward with a force of 100N but does not move. A possible reason for this is that:
- A The box is too heavy.
 B The box is too light.
 C The box is too heavy.
 D The box is too light.

QUESTION 2

Three organic compounds (A, B and C) with different functional groups are given below.

A: 2,3-dimethyl-2-one

C: $\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2\text{OH}$

- 2.1 Write down the functional group of compound C and name the cation to form such a variety of organic compounds. (2)
- 2.2 Define the term functional group. (2)
- 2.3 Write down the:
 2.3.1 IUPAC name of compound A. (2)
 2.3.2 IUPAC name of compound B. (2)

Selected Semiconductor Research Ming-Fu Li,2011

This book on solid state physics has been written with an emphasis on recent developments in quantum many body physics approaches. It starts by covering the classical theory of solids and electrons and describes how this classical model has failed. The authors then present the quantum mechanical model of electrons in a lattice and they also discuss the theory of conductivity. Extensive reviews on the topic are provided in a compact manner so that any non specialist can follow from the beginning. The authors cover the system of magnetism in a similar way and various problems in magnetic materials are discussed. The book also discusses the Ising chain, the Heisenberg model, the Kondo effect and superconductivity amongst other relevant topics. In the final chapter, the authors present some works related to contemporary research topics such as quantum entanglement in many body systems and quantum simulations. They also include a short review of some of the possible applications of solid state quantum information in biological systems.

If Einstein Ran the Schools Thomas Armstrong Ph.D., 2019-10-11 Many world class thinkers and creators have been concerned about the state of education in the United States. Discover their thoughts on how children really learn and what teachers must do to optimally tap children's latent abilities. During the last three decades, education reformers have pushed standardized testing and policies like No Child Left Behind and Common Core to improve test scores and proficiency in basic skills. However, during this period, that author Thomas Armstrong calls the miseducation of America, a number of troubling trends have surfaced, including a decrease in creative thinking scores among children in kindergarten through third grade. Rather than focus on what's wrong with the education system that has produced these outcomes, Armstrong lays out what creative thinkers know about how children should be educated. In an extended thought experiment, he asks what would happen if we turned the reins of educational policy over not to the politicians and educational bureaucrats but to eminent thinkers and creators like Albert Einstein, Pablo Picasso, Martin Luther King Jr., Rachel Carson, Doris Lessing, Jane Goodall, and other seminal culture builders. What might they say about the best way to educate a child? If Einstein Ran the Schools suggests that the answers to this intriguing question should guide future efforts to reform our nation's schools.

Handbook Of Green Materials: Processing Technologies, Properties And Applications (In 4 Volumes) Kristiina Oksman, Aji P Mathew, Alexander Bismarck, Orlando Rojas, Mohini Sain, 2014-04-11 Green materials and green nanotechnology have gained widespread interest over the last 15 years, first in academia, then in related industries in the last few years. The Handbook of Green Materials serves as reference literature for undergraduates and graduates studying materials science and engineering, composite materials, chemical engineering, bioengineering, and materials physics, and for researchers, professional engineers, and consultants from polymer or forest industries who encounter biobased nanomaterials, bionanocomposites, self and direct assembled nanostructures, and green composite materials in their lines of work. This four volume set contains material ranging from basic background information on the fields discussed to reports on the latest research and industrial activities, and finally the works by contributing authors who are prominent experts of the subjects they address in this set. The four

volumes comprise of The first volume explains the structure of cellulose different sources of raw material the isolation separation processes of nanomaterials from different material sources and properties and characteristics of cellulose nanofibers and nanocrystals starch nanomaterials Information on the different characterization methods and the most important properties of biobased nanomaterials are also covered The industrial point of view regarding both the processability and access of these nanomaterials as well as large scale manufacturing and their industrial application is discussed particularly in relation to the case of the paper industry The second volume expounds on different bionanocomposites based on cellulose nanofibers or nanocrystals and their preparation manufacturing processes It also provides information on different characterization methods and the most important properties of bionanocomposites as well as techniques of modeling the mechanical properties of nanocomposites This volume presents the industrial point of view regarding large scale manufacturing and their applications from the perspective of their medical uses in printed electronics and in adhesives The third volume deals with the ability of bionanomaterials to self assemble in either liquids or forming organized solid materials The chemistry of cellulose nanomaterials and chemical modifications as well as different assembling techniques and used characterization methods and the most important properties which can be achieved by self assembly are described The chapters for example discuss subjects such as ultra light biobased aerogels based on cellulose and chitin thin films suitable as barrier layers self sensing nanomaterials and membranes for water purification The fourth volume reviews green composite materials including green raw materials such as biobased carbon fibers regenerated cellulose fibers and thermoplastic and thermoset polymers e g PLA bio based polyolefines polysaccharide polymers natural rubber bio based polyurethane lignin polymer and furfurylalcohol The most important composite processing technologies are described including prepregs of green composites compounding liquid composite molding foaming and compression molding Industrial applications especially for green transportation and the electronics industry are also described This four volume set is a must have for anyone keen to acquire knowledge on novel bionanomaterials including structure property correlations isolation and purification processes of nanofibers and nanocrystals their important characteristics processing technologies industrial up scaling and suitable industry applications The handbook is a useful reference not only for teaching activities but also for researchers who are working in this field
