Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit

requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Alternative Accountabilities in Global Politics Brent J. Steele, 2013 In fields such as politics international relations public administration and international law there is a rapidly growing interest in the topic of accountability In this innovative new work Steele shows how we might recognize how an alternative form of accountability in global politics has been present for some time and that furthermore this form s continued presence remains one of the most politically powerful if not endurable possibilities for resistance in the near future This book argues that the physical and visually shocking outcomes of violence found on the bodies of humans as well as the buildings and landscapes which surround us specifically the scars they leave behind remain one of our most compelling forms of accountability Steele develops the theoretical argument on scars and exteriority utilizing insights from several philosophical and theoretical resources including Hannah Arendt Erving Goffmann and Richard Rorty The work examines scars and their effects through several illustrations including the accounts of Emmett Till Iranian protestor Neda Agha Soltan the Syrian boy Hamza al Khateeb the massacre in WWII and then memorializing throughout the 20th century of the Lidice children in the modern day Czech Republic the particular architecturally destructive outcomes of the 2008 9 Gaza War the loss of the Twin Towers in New York as well as a variety of violent scars found on the landscapes of Europe and Southeast Asia Emphasizing the importance of the space and time of scars the book illustrates how an alternative form of accountability in the scar can be a useful disruptive spontaneous but also creative practice to challenge the discourses of violence which remain with us today

Landslides and Engineered Slopes. Experience, Theory and Practice Stefano Aversa, Leonardo

Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 *Landslides and Engineered Slopes Experience Theory and Practice* contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12-19 June 2016. The book aims to emphasize the relationship between landslides and other natural hazards. Hence three of the main sessions focus on Volcanic induced landslides, Earthquake induced landslides and Weather induced landslides respectively, while the fourth main session deals with Human induced landslides. Some papers presented in a special session devoted to Subareal and submarine landslide processes and hazard and in a Young Session complete the book. *Landslides and Engineered Slopes Experience Theory and Practice* underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly to predict future and if required manage similar events. Practical benefits from the results of theory to protect people and man-made works. *Landslides and Engineered Slopes Experience Theory and Practice* is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.

Unclear Physics Målfrid Braut-Hegghammer, 2016-08-01 Many authoritarian leaders want nuclear weapons but few manage to acquire them. Autocrats seeking nuclear weapons fail in different ways and to varying degrees. Iraq almost managed it; Libya did not come close. In *Unclear Physics* Målfrid Braut-Hegghammer compares the two failed nuclear weapons programs showing that state capacity played a crucial role in the trajectory and outcomes of both projects. Braut-Hegghammer draws on a rich set of new primary sources collected during years of research in archives, fieldwork across the Middle East and interviews with scientists and decision makers from both states. She gained access to documents and individuals that no other researcher has been able to consult. Her book tells the story of the Iraqi and Libyan programs from their origins in the late 1950s and 1960s until their dismantling. This book reveals contemporary perspectives from scientists and regime officials on the opportunities and challenges facing each project. Many of the findings challenge the conventional wisdom about clandestine weapons programs in closed authoritarian states and their prospects of success or failure. Braut-Hegghammer suggests that scholars and analysts ought to pay closer attention to how state capacity affects nuclear weapons programs in other authoritarian regimes both in terms of questioning the actual control these leaders have over their nuclear weapons programs and the capability of their scientists to solve complex technical challenges. [The Rocket Lab](#) Michael G. Smith, 2023-05-15 *The Rocket Lab* Maurice Zucrow, Purdue University and *America's Race to Space* focuses on the golden era of space exploration between 1946 and 1966, specifically the life and times of Purdue University's Dr. Maurice J. Zucrow, a pioneering teacher and researcher in aerospace engineering. Zucrow taught America's first university course in jet and rocket propulsion, wrote the field's first textbook, and established the country's first educational Rocket Lab. He was part of a

small circle of innovators who transformed Purdue into the country's largest engineering university which became a cradle of astronauts Taking a chronological and thematic approach The Rocket Lab weaves between the local and national drawing in rival universities especially Harvard MIT Princeton and Caltech Also covered is Zucrow's role in the national project system of research and development through World War II and the Cold War At Aerojet he was one of the country's original project engineers dedicated to scientific technical expertise and the stepwise approach He made vanguard power plant contributions to the Northrop Flying Wing as well as the Corporal Nike and Atlas missiles among others Zucrow's work in propulsion helped to improve the country's arsenal of ballistic missiles and space launchers and as a teacher he educated the first generation of aerospace engineers This book elevates Zucrow and the central role he played in getting the United States to space

Overcoming Barriers to Deployment of Plug-in Electric Vehicles National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2015-06-26 In the past few years interest in plug in electric vehicles PEVs has grown Advances in battery and other technologies new federal standards for carbon dioxide emissions and fuel economy state zero emission vehicle requirements and the current administration's goal of putting millions of alternative fuel vehicles on the road have all highlighted PEVs as a transportation alternative Consumers are also beginning to recognize the advantages of PEVs over conventional vehicles such as lower operating costs smoother operation and better acceleration the ability to fuel up at home and zero tailpipe emissions when the vehicle operates solely on its battery There are however barriers to PEV deployment including the vehicle cost the short all electric driving range the long battery charging time uncertainties about battery life the few choices of vehicle models and the need for a charging infrastructure to support PEVs What should industry do to improve the performance of PEVs and make them more attractive to consumers At the request of Congress Overcoming Barriers to Deployment of Plug in Electric Vehicles identifies barriers to the introduction of electric vehicles and recommends ways to mitigate these barriers This report examines the characteristics and capabilities of electric vehicle technologies such as cost performance range safety and durability and assesses how these factors might create barriers to widespread deployment Overcoming Barriers to Deployment of Plug in Electric Vehicles provides an overview of the current status of PEVs and makes recommendations to spur the industry and increase the attractiveness of this promising technology for consumers Through consideration of consumer behaviors tax incentives business models incentive programs and infrastructure needs this book studies the state of the industry and makes recommendations to further its development and acceptance

The Changing University Dorothy Shore Zinberg, 2012-12-06 This collection of papers was written for a NATO Advanced Research Workshop held at Harvard University in March 1990 The title The Changing University and the Education of Scientists and Engineers An International Workshop broad as it is does not convey the sweep of data information opinions and suggestions for future research and policy choices that were crowded into two and a half days of

fonnal presentations mealtime discussions and teatime chats The proposal for the workshop grew out of a research project I had carried out that explored the policies governing the education of foreign science and engineering students S Es in several industrialized countries and of two countries that send large numbers of S E students abroad the People s Republic of China PRC and Japan see chapter 7 In research visits to these countries as well as to France the United Kingdom West Gennany and within the United States I was struck by the similarity of issues that were raised One was the concern that there would not be enough well trained scientists and engineers to meet the constantly increasing demand for them Government officials industrialists and educators repeatedly stressed that a well educated and motivated work force was essential for their economies national security and for society as a whole Many of those interviewed mentioned that universities are undergoing rapid systemic changes as governments and industry are calling on them to provide human resources and intellectual capital

EBOOK: Sports in Society Jay Coakley, Elizabeth Pike, 2014-04-16 Using a topics based approach organized around provocative questions about the interaction of sports culture and society *Sports in Society* presents an accessible introduction to research and theory in the sociology of sport This new edition continues the legacy of the previous editions while introducing new material and examples that bring theory to life Current debates in sports such as how youth participation can be increased or sport funding allocated have been integrated throughout the text to provide a holistic view of society An Online Learning Centre accompanies this book offering a range of lecturer support materials as well as resources and tests for students

Ploughshares and Swords Jayita Sarkar, 2022-07-15 India s nuclear program is often misunderstood as an inward looking endeavor of secretive technocrats In *Ploughshares and Swords* Jayita Sarkar challenges this received wisdom narrating a global story of India s nuclear program during its first forty years The book foregrounds the program s civilian and military features by probing its close relationship with the space program Through nuclear and space technologies India s leaders served the technopolitical aims of economic modernity and the geopolitical goals of deterring adversaries The politically savvy transnationally connected scientists and engineers who steered the program obtained technologies materials and information through a variety of state and nonstate actors from Europe and North America including both superpowers They thus maneuvered around Cold War politics and the choke points of the nonproliferation regime Hyperdiversification increased choices for the leaders of the nuclear program but reduced democratic accountability at home The nuclear program became a consensus enforcing device in the name of the nation *Ploughshares and Swords* is a provocative new history with global implications It shows how geopolitical and technopolitical visions influence decisions about the nation after decolonization Thanks to generous funding from the Swiss National Science Foundation the ebook editions of this book are available as Open Access volumes from Cornell Open cornellpress.cornell.edu/cornellopen and other repositories

Global Climate Change James C. White, 2012-12-06 Bacteria in a test tube and humans on our planet follow the same population curve as time elapses We on this earth largely through control of disease

are rapidly approaching maximum population and through energy demands are using up our resources and accumulating wastes. We have come to realize the danger of a maturing system but have made essentially no impact in mitigating or preventing the problems we face. While we have been able to change the world we live in, most of our effects have been to degrade the planet. We have nibbled away at the quality of the atmosphere for centuries and the accumulated damage has resulted in changing the world's climate at an ever-increasing rate. We now face the possibility of higher average temperatures over most of our planet, changing patterns of rainfall, rising sea levels, aggravated storm systems, and a myriad of social effects.

Cities and Crisis Kuniko Fujita, 2013-08-22 Recognizing the deep relations between politics, finance, cities, and citizens, this book argues for a rejuvenated account of urban theory. The book emphasises the need to understand the importance of the 2008 global financial crisis and how the crisis affects cities nested in a variety of political economies. Situating urban theory in the current economic climate, it powerfully illuminates the dynamic between history, theory, and practice. Stressing how catastrophic social and economic calamities under the crisis lead to reorganised city structures, city life, and city policies, and hence new urban experience, it calls for theoretical perspectives that can speak to these challenging changes. This groundbreaking title is a must for anyone interested in urban life and its rapid movements. It will be especially useful for students and researchers in urban sociology, planning, geography, urban and regional development, and urban studies.

Curriculum Practice Martyn Hammersley, Andy Hargreaves, 2012-05-04 When first published, this book was one of the first collections of empirical research in the area of the knowledge transmitted in schools and the responses of students to it. It includes studies of the histories of particular school subjects and of how the knowledge they embody is presented in the classroom. Attention is also given to the effects of gender stereotypes among teachers and pupils, both on pupils' selection of courses to study and on their reactions to particular subjects in the classroom. The other major topic in this collection is the way external examinations shape the nature of the school curriculum and how it is taught. There are studies of how pupils and teachers adapt to the exam system and of how that system and its role in the accountability of schools have changed in recent years. The articles collected here throw into relief important aspects of what is taught in schools and they do this on the basis of a solid foundation of empirical research.

De Minimis Risk Chris Whipple, 2012-12-06 On May 29 and 30, 1985, a workshop was held to explore the legal, ethical, social, scientific, and practical aspects of the use of the de minimis risk concept for health and safety regulation. The workshop was sponsored by the Society for Risk Analysis and its National Capital Area Chapter, the Environmental Protection Agency, the Nuclear Regulatory Commission, and the Electric Power Research Institute. The two-day meeting was held in Washington, D.C., at the Brookings Institution; however, the Brookings Institution was not a sponsor of the meeting and did not play a role in its program. De minimis risk policy considerations were addressed from a theoretical and philosophical viewpoint, from a quantitative and methodological basis, and through insights gained with regulatory applications. The distinctions between these three approaches to the subject are not sharp, most

papers in these proceedings address aspects of all three topics The reader familiar with the literature on the use of risk assessment in regulatory policy and decision making will find significant new contributions to the field One of these is the examination of regulatory actions in particular actions by the EPA in response to risks of varying magnitude Many attempts to seek patterns in regulatory policies have been based on analysis of the implicit economic value in obtaining risk reductions These analyses have typically found great variability in the marginal cost 1 effectiveness of regulatory actions Florida Springs Christopher F. Meindl, 2024-10-15 This book provides a clear and comprehensive overview of the geography history science and politics of Florida s freshwater springs informing readers about the deep past and current issues facing these natural wonders of the state Miniature Joule-Thomson Cryocooling Ben-Zion Maytal, John M.
