Quanta and Mind J. Acacio de Barros, Carlos Montemayor, 2019-09-19 This edited volume examines aspects of the mind consciousness that are relevant to the interpretations of quantum mechanics In it an international group of contributors focus on the possible connections between quantum mechanics and consciousness They look at how consciousness can help us with quantum mechanics as well as how quantum mechanics can contribute to our understanding of consciousness For example what do different interpretations aimed at solving the measurement problem in quantum mechanics tell us about the nature of consciousness such as von Neumann's interpretation Each interpretation has associated to it a corresponding metaphysical framework that helps us think about possible models of consciousness Alternatively what does the nature of consciousness tell us about the role of the observer and time reversibility in the measurement process The book features 20 papers on contemporary approaches to quanta and mind It brings together the work of scholars from different disciplines

with diverse views on the connections between quanta and mind ranging from those who are supportive of a link between consciousness and quantum physics to those who are very skeptical of such link Coverage includes such topics as free will in a quantum world contextuality and causality mind and matter interaction quantum panpsychism the quantum and quantum like brain and the role of time in brain mind dynamics

Essays on the Extended Evolutionary Synthesis Rodrick Wallace, 2023-05-18 From the punctuated equilibrium of Eldredge and Gould through Lewontin's triple helix and the various visions and revisions of the Extended Evolutionary Synthesis EES of Laland and others both data and theory have demanded an opening up of the 1950's Evolutionary Synthesis that so firmly wedded evolutionary theory to the mathematics of gene frequency analysis It can however be argued that a single deep and comprehensive mathematical theory may simply not be possible for the almost infinite varieties of evolutionary process active at and across the full range of scales of biological social institutional and cultural phenomena Indeed the case history of meme theory should have raised a red flag that narrow gene centered models of evolutionary process may indeed have serious limitations What is attempted here is less grand but still broader than a gene centered analysis Following the instruction of Maturana and Varela that all living systems are cognitive in a certain sense and that living as a process is a process of cognition the asymptotic limit theorems of information and control theories that bound all cognition provide a basis for constructing an only modestly deep but wider ranging series of probability models that might be converted into useful statistical tools for the analysis of observational and experimental data related to evolutionary process The line of argument in this series of interrelated essays proves to be surprisingly direct
