UNIT 26: ELECTRICITY AND MAGNETISM

Occasionally during these years . . . [Michael Faraday] thought of electrical problems. One of special interest was the question: Since magnetism can be produced from electricity, can electricity be produced from magnetism? Everything in nature is nicely balanced and symmetrical; in the words of Newton, there is action and there is reaction. Force will give motion; motion will give force. Heat will cause pressure; pressure will cause heat. Chemical action will produce electricity; electricity will produce chemical action. Then, since electricity will develop magnetism, will not magnetism develop electricity?

OBJECTIVES

A. Magnetism from Electricity

1. To learn by direct observation about the direction of magnetic field lines produced by a current in a straight wire.
2. To learn about the potential health effects of magnetic fields induced by electrical currents in power lines and home appliances.
3. To understand how to use Ampère's law to calculate the magnetic field around a closed loop in the presence of electrical currents.

B. Electricity from Magnetism

4. To observe that an electric field can be produced by a changing magnetic field by a process known as induction.
5. To explore the mathematical properties of induction as expressed in Faraday's law and to verify Faraday's law experimentally.
