

1. What is the distance between a 128 kg object and a 136 kg object if the gravitational force of attraction between them is 6.582×10^{-10} N?

$$6.582 \times 10^{-10} = \frac{G(128)(136)}{r^2}$$

$$r^2 = \frac{G(128)(136)}{6.582 \times 10^{-10}}$$

$$r^2 = 1764.07$$

$$r = 42 \text{ m}$$

2. The force of gravity between two objects is 1200 N when the objects are 60 m apart. Find the force of gravity between the objects when they are 480 m apart.

Inverse square law:

Objects further apart, $F_g \downarrow$

$480 \div 60 = 8 \times$ further apart, so F_g is $8^2 = 64 \times$ smaller

$$1200 \div 64 = 18.8 \text{ N}$$

3. Two students are on a skateboards and push away from each other. A 48 kg student accelerates away at 2.6 m/s^2 . Find the acceleration of the other student if their mass is 32 kg. Action-reaction forces

$$F_{\text{net}} = ma$$

$$F_{\text{net}} = 48(2.6)$$

$$F_{\text{net}} = 124.8 \text{ N}$$

F_{net} is the same
for both students

$$F_{\text{net}} = ma$$

$$124.8 = 32a$$

$$a = 3.9 \text{ m/s}^2$$

4. A 42.0 N force is applied to a 6.00 kg block but it only accelerates at 5.50 m/s^2 . Determine both the force and the coefficient of friction.

$$F_{\text{net}} = ma$$

$$42 - F_f = 6(5.5)$$

$$42 - F_f = 33$$

$$F_f = 9.0 \text{ N}$$

$$F_f = \mu F_N$$

$$9.0 = \mu(58.8)$$

$$\mu = 0.153$$

5. A go-cart, traveling at 65 km/h , skids to a stop. If the coefficient of friction between the tires and the asphalt is 0.59, how far does the go-cart skid?

no forwards
force!

$$F_{\text{net}} = ma$$

$$F_f = ma$$

$$\mu F_N = ma$$

$$\mu mg = ma$$

$$\mu g = a$$

$$0.59(9.8) = a$$

$$a = 5.782$$

$$v_i = 18.06$$

$$v_f = 0$$

$$d = ?$$

$$a = -5.782$$

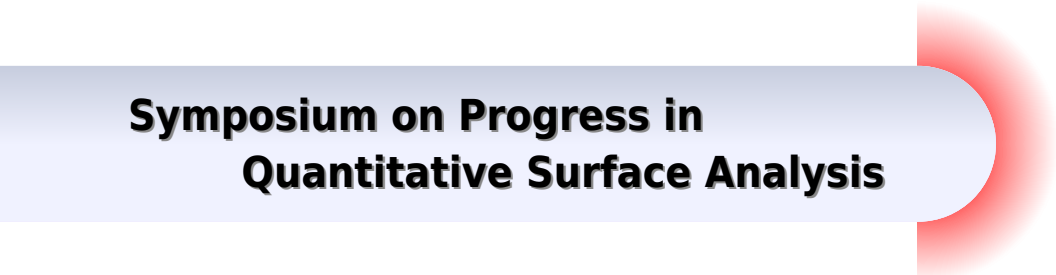

$$t = x$$

$$v_f^2 - v_i^2 = 2ad$$

$$d = 28.2 \text{ m}$$

Finlayson, 2003 **Physics** Holt Rinehart & Winston, 2000-12 *Bergson and Modern Physics* M. Capek, 2012-12-06 Milic Capek has devoted his scholarship to the history and philosophy of modern physics With impeccable care he has mastered the epistemological and scientific developments by working through the papers treatises correspondence of physicists since Kant and likewise he has put his learning and critical skill into the related philosophical literature Coming from his original scientific career with a philosophy doctorate from the Charles University in Prague Capek has ranged beyond a narrowly defined philosophy of physics into general epistemology of the natural sciences and to the full historical evolution of these matters He has expounded his views on these matters in a number of articles and systematically in his book *The Philosophical Impact of Contemporary PhYSiCS* published in 1961 and reprinted with two new appendices in 1969 His particular gift for many of his readers and students lies in the great period from the mid nineteenth century through the foundations of the physics and philosophy of the twentieth and within this spectacular time Professor Capek has become a principal expositor and sympathetic critic of the philosophy of Henri Bergson He joins a distinguished group of scholars physicists and philosophers who have been stimulated to some of their most profound and imaginative thought by Bergson's metaphysical and psychological work Cassirer Meyerson de Broglie Metz Jankelevitch Zawirski and in recent years Costa de Beauregard Watanabe Blanche and others Problem Solving S. expertise is within psychology and over his long career he came to realise the importance of physics to the field. In particular, the branches that place mind and consciousness in the foreground of how we might understand the universe and our place within it. There is a deep organising principle operating at all levels of the universe. It gives rise to life and is apparent within the human mind in dreams and creativity. A key lesson from quantum physics is that consciousness and the human mind are inextricably involved in the emergence of what we can observe and experience of our matter-based realm. In other words, the behaviour of the quantum realm is shaped by our observation of it. Just as we think of space-time as shaped by gravitational forces and massive bodies, so we can conceptualise mind-space. The latter contains mathematical correlations of thought, emotion, and memory whereby what is similar attracts more of the same in a manner analogous to gravity. These have effects within the mind and in the wider life-field. For example, severe and repeated childhood trauma creates the equivalent of black holes in the mind-space. Metaphysics posits that our matter-based universe is subtended within an infinite unified field of intelligence and creativity. We are contained within a vast mind. The principle is that unlimited guidance and knowledge is available via meditation and intuition, requiring only that we seek. It is never thrust upon us. This is a book filled with extraordinary ideas to dip into wherever curiosity and intuition lead. It is the author's fervent wish that what is within will stimulate thought and awareness and spark continuing creative concepts concerning our place in this cosmos.

Quantum Information Meets Quantum Matter Bei Zeng, Xie Chen, Duan-Lu Zhou, Xiao-Gang Wen, 2019-03-28 This book approaches condensed matter physics from the perspective of quantum information science focusing on systems with strong interaction and unconventional order for which the usual condensed matter methods like the Landau paradigm or the free fermion framework break down Concepts and tools in quantum information science such as entanglement quantum circuits and the tensor network representation prove to be highly useful in studying such systems The goal of this book is to introduce these techniques and show how they lead to a new systematic way of characterizing and classifying quantum phases in condensed matter systems The first part of the book introduces some basic concepts in quantum information theory which are then used to study the central topic explained in Part II local Hamiltonians and their ground states Part III focuses on one of the major new phenomena in strongly interacting systems the topological order and shows how it can essentially be defined and characterized in terms of entanglement Part IV shows that the key entanglement structure of topological states can be captured using the tensor network representation which provides a powerful tool in the classification of quantum phases Finally Part V discusses the exciting prospect at the intersection of quantum information and condensed matter physics the unification of information and matter Intended for graduate students and researchers in condensed matter physics quantum information science and related fields the book is self contained and no prior knowledge of these topics is assumed

The Collected Scientific Papers of Paul A. Samuelson Paul Anthony Samuelson, 1966 It is a measure of Professor Samuelson's preeminence that the sheer scale of his work should be so much taken for granted observes a reviewer in the Economist who goes on to note that a cynic

might add that it would have been better for Professor Samuelson to write less merely to give others a chance to write at all. These volumes contain virtually all of Professor Paul A Samuelson's contributions to economic theory through mid 1964, a total of 129 papers. Included are his classic articles on such topics as revealed preference, factor price equalization and public goods, as well as some articles which until now have only been privately circulated or buried in Festschriften such as *Market Mechanisms and Maximization* and *The Structure of a Minimum Equilibrium System*. The articles have been grouped together into five books compiled in two volumes. The books in turn have been divided into sections each of which contains articles on the same or closely related topics. Within the sections the articles are arranged chronologically. The graduate student and professional economist will welcome *The Collected Scientific Papers of Paul A Samuelson* as a valuable addition to their libraries.
