

- (1) If the pressure of the gas is double volume becomes half. If pressure increases by three times then the volume becomes one-third and so on.
- (2) The graph between "p" and "V" between "p and $\frac{1}{V}$ " is shown below:

- (3) The graph between "p" and "V" shows that if pressure increases then volume decreases and vice-versa.
- (4) The graph between "p" and " $1/V$ " shows a straight line passing through the origin.
- (5) At constant temperature the product of pressure and volume is constant. i.e.

$$pV = \text{constant}$$
- (6) Using the above result, at a constant temperature, we can write:
 initial pressure $\times$ initial volume = final pressure $\times$ final volume

$$p_1V_1 = p_2V_2$$

Thus Robert Boyle concluded his Law known as "Boyle's Law" which states that:

Statement of Boyle's Law:

The volume of a fixed mass of a gas is inversely proportional to its pressure, provided its temperature remains constant.

Q.23: Write down the application of Boyle's Law.

Ans: Applications of (p-V) relationship of gas / Boyle's Law:

Some applications of pressure-volume (p-V) relationship of a gas i.e. Boyle's Law is given below:

Aerosols, such as spray paints, use Boyle's Law in their working mechanism.

When we breathe, our diaphragm moves downward, increasing the volume of the Lungs. This causes the pressure inside the Lungs to be less than the outside pressure so air rushes in.

Thermal Properties of Matter Joe Khachan, 2018-02-20 The ancient Greeks believed that all matter was composed of four elements earth water air and fire By a remarkable coincidence or perhaps not today we know that there are four states of matter solids e g earth liquids e g water gasses e g air and plasma e g ionized gas produced by fire The plasma state is beyond the scope of this book and we will only look at the first three states Although on the microscopic level all matter is made from atoms or molecules everyday experience tells us that the three states have very different properties The

aim of this book is to examine some of these properties and the underlying physics

Mathematics for Physicists Brian R. Martin, Graham Shaw, 2015-06-15 Mathematics for Physicists is a relatively short volume covering all the essential mathematics needed for a typical first degree in physics from a starting point that is compatible with modern school mathematics syllabuses Early chapters deliberately overlap with senior school mathematics to a degree that will

depend on the background of the individual reader who may quickly skip over those topics with which he or she is already familiar. The rest of the book covers the mathematics that is usually compulsory for all students in their first two years of a typical university physics degree plus a little more. There are worked examples throughout the text and chapter end problem sets. *Mathematics for Physicists* features Interfaces with modern school mathematics syllabuses. All topics usually taught in the first two years of a physics degree. Worked examples throughout. Problems in every chapter with answers to selected questions at the end of the book and full solutions on a website. This text will be an excellent resource for undergraduate students in physics and a quick reference guide for more advanced students as well as being appropriate for students in other physical sciences such as astronomy, chemistry and earth sciences.

Solutions to the Mystery of Consciousness

Tapan Das, 2018-07-12. Ask someone to define consciousness and you'll get a myriad of similar sounding answers including the awareness of one's own existence, sensations, thoughts, surroundings and so on. But what is it really? That question has stumped philosophers of every religion and culture since the beginning of mankind, but Tapan Das, Ph.D., reveals the answer in this groundbreaking book on the nature of consciousness. He begins by examining the two scientific views of consciousness: monistic and dualistic. The monistic view says that the brain does all the functions and as such there is nothing called consciousness. The dualistic view says that the brain and consciousness are two separate things. Through extensive research and analysis, Das has found that the frequency of brain waves depends on the alertness of the mind, that is, the level of consciousness. Therefore, consciousness is a function of brain wave frequency. Whether you're a cognitive scientist, psychologist, neuropsychologist, neuroscientist, philosopher or just someone interested in knowing more about humanity, you'll enjoy discovering *Solutions to the Mystery of Consciousness*.
