(Class 11)

Question 1.7:

A student measures the thickness of a human hair by looking at it through a microscope of magnification 100. He makes 20 observations and finds that the average width of the hair in the field of view of the microscope is 3.5 mm. What is the estimate on the thickness of hair?

Answer 1.7:

Magnification of the microscope = 100

Average width of the hair in the field of view of the microscope = 3.5 mm

∴ Actual thickness of the hair is $\frac{3.5}{100} = 0.035$ mm.

Question 1.8:

Answer the following:

(a) You are given a thread and a metre scale. How will you estimate the diameter of the thread?

(b) A screw gauge has a pitch of 1.0 mm and 200 divisions on the circular scale. Do you think it is possible to increase the accuracy of the screw gauge arbitrarily by increasing the number of divisions on the circular scale?

(c) The mean diameter of a thin brass rod is to be measured by vernier callipers. Why is a set of 100 measurements of the diameter expected to yield a more reliable estimate than a set of 5 measurements only?

Answer 1.8:

(a) Wrap the thread on a uniform smooth rod in such a way that the coils thus formed are very close to each other. Measure the length of the thread using a meter scale. The diameter of the thread is given by the relation, $\text{Diameter} = \frac{\text{Length of thread}}{\text{Number of turns}}$

(b) It is not possible to increase the accuracy of a screw gauge by increasing the number of divisions of the circular scale. Increasing the number divisions of the circular scale will increase its accuracy to a certain extent only.

(c) A set of 100 measurements is more reliable than a set of 5 measurements because random errors involved in the former are very less as compared to the latter.

Question 1.9:

The photograph of a house occupies an area of 1.75 cm^2 on a 35 mm slide. The slide is projected on to a screen, and the area of the house on the screen is 1.55 m^2 . What is the linear magnification of the projector-screen arrangement?

Answer 1.9:

Area of the house on the slide = 1.75 cm^2

Area of the image of the house formed on the screen

= 1.55 m^2

= $1.55 \times 10^4 \text{ cm}^2$

Arial magnification, $m_a = \frac{\text{Area of image}}{\text{Area of object}} = \frac{1.55}{1.75} \times 10^4$

∴ Linear magnifications, $m_l = \sqrt{m_a}$

= $\sqrt{\frac{1.55}{1.75} \times 10^4} = 94.11$

Study Guide and Laboratory Exercises for Technology for Diagnostic Sonography - E-Book Wayne R. Hedrick, Paul R. Wagner, 2016-06-24 Gain a firm foundation for sonography practice Corresponding to the chapters in Hedrick's Technology for Diagnostic Sonography this study guide focuses on basic concepts to help you master sonography physics and instrumentation It includes laboratory exercises designed to teach you how to operate a scanner and comprehensive review questions allow you to assess your knowledge Not only will you learn the theoretical knowledge that is the basis for ultrasound scanning but also the practical skills necessary for clinical practice Laboratory exercises teach you the function of operator controls and how to optimize image quality and practice ALARA and include step by step instructions for scanner operation for hands on application and practice 250 review questions help you assess your understanding of sonography physics and instrumentation and identify areas of knowledge that may need further study Key Points at the beginning of each chapter emphasize the most important sonography principles that you need to understand and apply

What Are They Thinking? Page Keeley ,2014-04-01 Children are continually developing ideas and explanations about their natural world Some of these ideas are consistent with the science children are taught others differ significantly from scientific explanations Many of these ideas will follow students into adulthood if they remain hidden from the teacher and unresolved The challenge for teachers is to find ways to elicit these ideas and then use appropriate strategies to move students learning forward Page Keeley author of the bestselling NSTA Press series Uncovering Student Ideas in Science You don't have to become a mind reader to understand the ideas young students bring to science class This collection will help you draw out and then recognize what students know or think they know about the natural world What Are They Thinking is a compendium of 30 Formative Assessment Probes columns from NSTA's elementary journal Science and Children Each chapter provides A sample formative assessment probe a set of interesting questions that root out commonly held often mistaken ideas Geared to elementary students probe topics range from why you can see the Moon in the daytime to where water goes when it evaporates to what is or isn't a rock Your students answers to each probe will help you take a step back

and figure out how to guide them from where they are conceptually to where they need to be Accompanying teacher notes easy to grasp explanations and advice that tell you how to encourage evidence based discussion and then monitor students understanding A bonus feature a set of study group questions written especially for this compendium by award winning author Page Keeley So forget about acquiring psychic powers Instead turn to What Are They Thinking to transform both your teaching and your students learning about science Resources in Education ,1997-04 **Psychology Study Guide** Cornelius Rea,2005-06-10 For every chapter the Study Guide will include a Preview and At A Glance sections both provide an overview of and objectives for the chapter Each major topic includes a progress test comprised of multiple choice matching and or true false questions The Guide also contains Graphic Organizers which encourage students to complete graphs charts and flow diagrams that ultimately provide a visual synopsis of text material End of chapter material includes Something To Think About sections which contain thought provoking questions designed to encourage critical thinking and application of the material **Air Force Manual** United States.
