Stage Lighting Second Edition Richard E. Dunham, 2018-10-16 *Stage Lighting The Fundamentals* is written specifically for introductory stage lighting courses. The book begins with an examination of the nature of light perception and color, then leads into a conversation of stage lighting equipment and technicians. Lamps, luminaries, controls, dimming, and electricity form the basis of these chapters. The book also provides a detailed explanation and overview of the lighting design process for the theatre and several other traditional forms of entertainment. Finally, the book explores a variety of additional areas where lighting designers can find related future employment, such as concert and corporate lighting, themed design, architectural and landscape lighting, and computer animation. New for this edition: enlarged full color illustrations, photographs, light plots, and examples of lighting design; updated information on LED lighting and equipment; expanded discussion of the practical use of color as a designer; expanded discussion of psychological/perceptual effects of color; new discussion of color mixing through light sources that make use of additive mixing; expanded discussion of industry professions; expanded discussion and illustrations relating to photometrics; expanded discussion and examples of control protocols and new equipment; and updated designer profiles along with the addition of still more designer profiles. **American Architect and the Architectural**

layered approach that builds on basic principles Light as a Medium Part 1 Tools of a Lighting Designer Part 2 Design Fundamentals Part 3 and Lighting Applications Part 4 This presents students with a practical and logical sequence when learning basic concepts The full spectrum of the lighting design process is presented in detail giving students an example of how one might develop a lighting design from script analysis through concept and plot development and all the way to an opening This detailed process with a step by step design approach gives students a plan to work from which they can later modify as they mature and gain confidence as designers The text contains a more comprehensive discussion of basic technology light as a physical phenomena and methodology of designs than is found in most introductory texts bridging the gap between introductory and advanced lighting courses The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design while at the same time gaining a solid grounding in the fundamentals of lighting design Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the design approaches of theatrical lighting design The final 9 chapters cover many specialty areas of lighting design highlighting the unique and shared qualities that exist between the different aspects of these elements Discussions involve traditional entertainment areas like theatre as well as lesser known facets of the industry including film video landscape lighting retail museum lighting virtual lighting concert spectacle performances and architectural lighting Models of design tasks demonstrate the actual use and development of plots sections schedules photometrics tables and cut sheets rather than simply talking about what they are This hands on approach provides students with a firm understanding of how to actually use these tools and processes **Electrical**
