Personal Philosophy Nursing:

Role Development in Professional Nursing Practice Kathleen Masters, 2005 Designed for use in sequential professional development courses across the curriculum Role Development in Professional Nursing Practice covers role development of the professional nurse as it occurs in three developmental stages moving from the simple to the more complex Nurse as Individual Nurse Client Relationships and Nurse as Member of the Health Care Team **Personal Philosophy and Disciplinary Perspective of Nursing** Mona Alaanzi, 2016-11-17 Essay aus dem Jahr 2016 im Fachbereich Pflegewissenschaft Pflegemanagement Sprache Deutsch Abstract Gaining more experience and knowledge in philosophy nursing philosophy and the nursing paradigm has helped me to know more about myself as a human being and as a nurse In the process of reading I find it hard to commit to one point of view or one perspective however now I clearly see where I fit My philosophical perspective in general and in nursing specifically are heavily influenced by the empiricism and positivism perspective and ultimately aligns with the totality nursing paradigm From my ontological perspective in general I believe in objectivism that there is a single truth and there is a single reality I believe that we as human beings are always in interaction with the external reality which is the environment I believe that the environment is everything surrounding us and we as human beings interact with and influence the environment and the environment interacts with and influences us in turn In other words if someone follows a certain action he she will be able to predict what the outcomes will be To illustrate if I throw a ball up in the air I expect that it will hit the ground Another example could be if I follow a specific diet and a specific exercise to lose weight then the result will be what I expected which is weight loss unless there are some other contributing factors From my epistemological standpoint I believe that reality can be captured by senses and can be predicted by experience I believe that there is no knowledge without experience To illustrate if someone says an apple is red I can't imagine what the apple looks like if I have never seen a red one before How can one know what something tastes like if they have never tasted it Experience is anything that came across our mind at any certain time in the past I also believe that knowledge can be gained through reasoning According to wisdom in my culture The reason is known the surprise is blown In other words knowledge needs clarifications and explanation so only reasoning can transform sensory data into something meaningful and understandable *Role Development in Professional Nursing Practice* Masters, 2015-11-18 Role Development in Professional Nursing Practice Third Edition examines the progression of the professional nursing role and provides students with a solid foundation for a successful career This essential resource includes recommendations from current research and utilizes a comprehensive competency model as its framework Key features incorporates the Nurse of the Future NOF Nursing Core Competencies based on the AACN's Essentials of Baccalaureate Education the IOM's Future of Nursing report and QSEN competencies throughout the text key competencies highlight knowledge skills and attitudes KSA required of the professional nurse includes new case studies and content congruent with recommendations from the
