Technological Innovation in Legacy Sectors William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems expanding innovation and raising the rate of quality job creation Both have roots in a neglected problem the resistance of Legacy economic sectors to innovation While the U S has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology most of its economy is locked into Legacy sectors defended by technological economic political social paradigms that block competition from disruptive innovations that could challenge their models Americans like to build technology covered wagons and take them out west to open new innovation frontiers we don't head our wagons back east to bring innovation to our Legacy sectors By failing to do so the economy misses a major opportunity for innovation which is the bedrock of U S competitiveness and its standard of living Technological Innovation in Legacy Sectors uses a new unifying

conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors energy air and auto transport the electric power grid buildings manufacturing agriculture health care delivery and higher education and develops approaches to understand and transform them It finds both strengths and obstacles to innovation in the national innovation environments a new concept that combines the innovation system and the broader innovation context for a group of Asian and European economies Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process By increasingly offshoring production the U S is losing important parts of its innovation capacity Innovate here produce here where the U S took all the gains of its strong innovation system at every stage is being replaced by innovate here produce there which threatens to lead to produce there innovate there To bring innovation to Legacy sectors authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations In the specific case of advanced manufacturing the production ecosystem can be recreated to reverse jobless innovation and add manufacturing led innovation to the U S s still strong research oriented innovation system

Handbook Of Energy Finance: Theories, Practices And Simulations Stephane Goutte,Duc Khuong Nguyen,2020-01-30 Modeling the dynamics of energy markets has become a challenging task The intensification of their financialization since 2004 had made them more complex but also more integrated with other tradable asset classes More importantly their large and frequent fluctuations in terms of both prices and volatility particularly in the aftermath of the global financial crisis 2008 2009 posit difficulties for modeling and forecasting energy price behavior and are primary sources of concerns for macroeconomic stability and general economic performance This handbook aims to advance the debate on the theories and practices of quantitative energy finance while shedding light on innovative results and technical methods applied to energy markets Its primary focus is on the recent development and applications of mathematical and quantitative approaches for a better understanding of the stochastic processes that drive energy market movements The handbook is designed for not only graduate students and researchers but also practitioners and policymakers

Design and Assessment of Sustainable Products Magdalena Wojnarowska,Carlo Ingraio,2024-12-30 This book questions the current definition of what makes a product sustainable and argues that a holistic approach to sustainable product design is required one that considers all aspects of a product s life cycle from design to production to use and then final disposal This edited collection introduces a new set of methods and tools aligned with the concept of comprehensive sustainable produce design that integrates the environmental and social benefits of a product in line with the principles of a circular economy It provides a comprehensive understanding of the theoretical and practical framework that underpins a sustainable product highlighting the multiple key roles of eco design innovation quality and sustainability The authors describe the criteria for which products can be defined as being sustainable and outline how

different manufacturing technologies influence the value of those products and the place they can find on the market accordingly The book s significant contribution lies in identifying the critical factors that are needed to successfully implement the framework throughout the entire life cycle of the product in a holistic integrated approach This book will be of interest for researchers and students studying sustainable product design environmental studies engineering and sustainable business management It will also be a useful resource for representatives of the business community managers technicians decision makers and consumers interested in sustainable product design issues Comparative Data Law Josef Drexler, Moritz Hennemann, Patricia Bosche, Klaus Wiedemann, 2025-08-02 This book contains the proceedings of the conference Comparative Data Law which was held in Munich in December 2023 The increasing relevance of data is now recognized all over the world The large number of regulatory acts and proposals in the field of data law serves as a testament to the significance of data processing for the economies of the world The European Union s Data Strategy the African Union s Data Policy Framework and the Australian Data Strategy only serve as examples within a plethora of regulatory actions Yet the purposeful and sensible use of data does not only play a role in economic terms e g regarding the welfare or competitiveness of economies The implications for society and the common good are at least equally relevant For instance data processing is an integral part of modern research methodology and can thus help to address the problems the world is facing today such as climate change The conference was the third and final event of the Global Data Law Conference Series Legal scholars from all over the world met presented and exchanged their experiences on different data related regulatory approaches Various instruments and approaches to the regulation of data personal or non personal were discussed without losing sight of the global effects going hand in hand with different kinds of regulation In compiling the conference proceedings this book does not only aim at providing a critical and analytical assessment of the status quo of data law in different countries today it also aims at providing a forward looking perspective on the pressing issues of our time such as How to promote sensible data sharing and purposeful data governance Under which circumstances if ever do data localisation requirements make sense How and by whom should international regulation be put in place The proceedings engage in a discussion on future oriented ideas and actions thereby promoting a constructive and sensible approach to data law around the world **ITNG 2023**
