Physical Sciences Mind The Gap 2014:

Science Identities Henriette Tolstrup Holmegaard, Louise Archer, 2023-01-23 This edited volume brings together a state of the art collection of leading and emergent research on the burgeoning topic of science identities It sets out how science identity can be productively used as a lens in understanding patterns and inequalities in science participation across different educational and international contexts Its chapters reveal how intersections of social identities and inequalities shape participation and engagement in science Particular attention is given to explicating issues of theory and method identifying the potential and limitations of approaches and lacunae in existing knowledge The book showcases research from a range of disciplinary areas employing diverse methodological and conceptual approaches to investigate science identities across different fields and settings The collection offers a rich and comprehensive understanding of how science identity can be used conceptually methodologically and analytically to understand how learners and teachers relate to and make sense of science It is a valuable resource for students researchers and academics in the field of science education and anyone who is interested in identity and education

Mind The Gap: The Labyrinthine Story Of Planetary Orbits, Mathematics, And The Titius-Bode Rule Martin Beech, 2023-08-15 This book is concerned with two tightly knit topics those of mathematics and astronomy Its focus is primarily concerned with planetary astronomy and specifically the history of accounting for the spacing of planetary orbits The story begins with the ancient Greek philosophers and continues to the modern era and the new data being gleaned from the study of exoplanetary systems Throughout the text the manner in which mathematical theory has been used to decipher and impose order upon the solar system will be examined Attention and discussion will be directed towards the so called Titius Bode rule a long standing ordering principle that in fact it has no physical underpinning or explanation The story presented will look at how humanity has learned about the workings of the solar system and it will look at the philosophical problems that arise when mathematical exposition leads observation Furthermore the fundamental role of mathematics in the development of physical theory is examined and it is argued that there are some gaps in our knowledge of the solar system and the universe that mathematics and physical theory will never successfully bridge The text will present material at the informed amateur scientist university undergraduate student level

Nineteenth-Century Poetry and the Physical Sciences Gregory Tate, 2020-06-17 Poetical Matter examines the two way exchange of language and methods between nineteenth century poetry and the physical sciences The book argues that poets such as William Wordsworth Mathilde Blind and Thomas Hardy identified poetry as an experimental investigation of nature's materiality It also explores how science writers such as Humphry Davy Mary Somerville and John Tyndall used poetry to formulate their theories to bestow cultural legitimacy on the emerging disciplines of chemistry and physics and to communicate technical knowledge to non specialist audiences The book's chapters show how poets and science writers relied on a set of shared terms form experiment rhythm sound measure and how the meaning of those terms was debated and

reimagined in a range of different texts A stimulating analysis of nineteenth century poetry and physics In this groundbreaking study Tate turns to sound to tease out fascinating continuities across scientific inquiry and verse Reflecting that the processes of the universe were themselves rhythmic he shows that a wide range of poets and scientists were thinking through undulatory motion as a space where the material and the immaterial met The motion of waves Tate demonstrates was the exemplary form in the physical sciences Sound waves light energy and poetic meter were each characterized by a process of undulation that could be understood as both a physical and a formal property Drawing on work in new materialism and new formalism Tate illuminates a nineteenth century preoccupation with dynamic patterning that characterizes the undulatory as in John Herschel s words not things but forms Anna Henchman Associate Professor of English at Boston University USA This impressive study consolidates and considerably advances the field of physics and poetry studies Moving easily and authoritatively between canonical and scientist poets *Nineteenth Century Poetry and the Physical Sciences* draws scientific thought and poetic form into telling relation disclosing how they were understood variously across the nineteenth century as both comparable and competing ways of knowing the physical world Clearly written and beautifully structured *Nineteenth Century Poetry and the Physical Sciences* is both scholarly and accessible a fascinating and indispensable contribution to its field Daniel Brown Professor of English at the University of Southampton UK

Essential reading for Victorianists Tate s study of nineteenth century poetry and science reconfigures debate by insisting on the equivalence of accounts of empirical fact and speculative theory rather than their antagonism The undulatory rhythms of the universe and of poetry the language of science and of verse come into new relations Tate brilliantly re reads Coleridge Tennyson Mathilde Blind and Hardy through their explorations of matter and ontological reality He also addresses contemporary theory from Latour to Jane Bennett Isobel Armstrong Emeritus Professor of English at Birkbeck University of London UK

Routledge Handbook of Environmental Policy Helge Jörgens, Christoph Knill, Yves Steinebach, 2023-06-28 This Handbook provides a state of the art review of research on environmental policy and governance The Routledge Handbook of Environmental Policy has a strong focus on new problem structures a perspective that emphasizes the preconditions and processes of environmental policymaking and a comparative approach that covers all levels of local national and global policymaking The volume examines the different conditions under which environmental policymaking takes place in different regions of the world and tracks the theoretical conceptual and empirical developments that have been made in recent years It also highlights emerging areas where new and or additional research and reflection are warranted Divided into four key parts the accessible structure and the nature of the contributions allow the reader to quickly find a concise expert review on topics that are most likely to arise in the course of conducting research or developing policy and to obtain a broad reliable survey of what is presently known about the subject The resulting compendium is an essential resource for students scholars and policymakers working in this vital field

Didactics in a Changing World Florence Ligozat, Kirsti Klette, Jonas

Almqvist,2023-01-27 The collection of chapters in this book results from ongoing scientific discussions on teaching learning and curriculum studies in Europe Didactics as a research field and area of knowledge deals with questions about teaching learning and educational content Didactics explores institutionalized teaching and learning processes that are fundamental to allow people living together and acting as citizens It connects curriculum issues to classroom practices and student s learning experience in a unique manner that goes beyond the field of curriculum studies and the field of the learning sciences Focusing on different research traditions for conceptualizing the relationships between learning and teaching through the educational content learnt the book presents advanced research in field of Didactics teaching and learning that addresses the new challenges faced by the teaching profession The collection of chapters in this book supports the continuous growth of comparative research on classroom practices and addresses in a novel manner the need for including international perspectives on Didactics in teacher education programs and graduate schools in education worldwide Part 1 highlights the recent advances in the theoretical development of Didactics and more particularly the development of comparative didactics Part 2 illustrates the diversity and complementarities of theoretical and methodological approaches for the empirical study of classroom practices Part 3 maps certain societal challenges that didactic research faces in a changing world **Creating**

Built Environments Roderick Lawrence,2020-06-14 Built environments are complex emergent systemic and require contextual analysis They should be understood before reconsidering how professionals and researchers of the built environment are educated and trained to reduce the gap between knowledge practice and real world circumstances There is an urgent need to rethink the role of policy makers researchers practitioners and laypeople in the construction renovation and reuse of the built environment in order to deal with numerous environmental ecological economic financial and social ethical challenges of providing a habitat for current and future generations in a world of continual change These challenges are too complex to be dealt with only by one discipline or profession Combinations of different types of knowledge knowing in praxis and tacit knowledge are needed This book presents and illustrates recent innovative contributions with case studies focusing on five strategic domains and the interrelations between them These transdisciplinary contributions apply concepts methods and tools that facilitate convergence and concerted action between participants collaborating in policy definition and project implementation The methods and tools include experiments in living labs prototypes on site and virtual simulations as well as participatory approaches including citizen science the development of alternative scenarios and visioning plausible futures **TechnoScienceSociety** Sabine Maasen,Sascha Dickel,Christoph Schneider,2020-07-01 This

book introduces the term of TechnoScienceSociety to focus on the ongoing technological reconfigurations of science and society It aspires to use the breadth of Science and Technology Studies to perform a critical diagnosis of our contemporary culture Instead of constructing technology as society s other the book sets out to highlight the both complex and ambivalent entanglements of technologies sciences and socialities It provides some tentative steps towards a diagnosis of a society in

which individuals and organizations address themselves their pasts presents futures hopes and problems in technoscientific modes Technosciences redesign matter life self and society However they do not operate independently Technoscientific practices are deeply socially and culturally constituted The diverse contributions highlight the ongoing technological reconfigurations of rationalities infrastructures modes of governance and publics The book aims to inspire scholars and students to think and analyze contemporary conditions in new ways drawing on and expanding the toolkits of Science and Technology Studies

Time And Science - Volume 3: Physical Sciences And Cosmology Remy Lestienne,Paul Harris,2023-06-22 The present volume of Time and Science series is devoted to Physical Sciences and Cosmology Today more than ever the question is Time an ontological property a necessary ingredient for the physical description of the world or a purely epistemological element relative to our situation in the world worry physicists and cosmologists alike For many of them Relativity and particularly General Relativity as well as its reconciliation with quantum mechanics in the elaboration of a quantum theory of gravitation points to a negative answer to the first alternative and leads them to deny the objective reality of time For others the answer is nuanced by the evidence of an emerging temporal property when one climbs the scales of the complexity of systems and or the applicability of the statistical laws of thermodynamics But for some the illusion of the unreality of time comes from certain confusions that they denounce and plead for the re establishment of time at the heart of physical theories
