

Interpreting Physical Therapy Notes

Sending a patient to physical therapy does not always guarantee that they are going to receive the same treatment. In fact, the same patient with the same diagnosis sent to varying practices most likely will receive a variety of different treatment techniques. While all aimed at decreasing pain, increasing strength, and improving the patients' function, each therapist has their own different methods and techniques in which they feel will lead to the patient's recovery. Even when different therapists see the same patient in the same therapy practice, they often come up with a different plan of care for the patient to follow.

Some therapists may choose a modality oriented therapy approach, while others advocate exercises. Some therapists are overly aggressive with their patients and some insist on passive therapies. Many work injury patients endure an industrial rehabilitation approach while others go through more hands-on therapy. Most therapies have been proven to be successful and often if one approach is not working the therapist will switch gears to concentrate on a different technique. No one can say for sure which therapy technique would be most appropriate until the patient begins therapy.

Since there are so many different types of physical therapy, all aimed at accomplishing similar goals – often it is the case manager who finds themselves attempting to determine whether or not the therapy that the patient is receiving is justified, necessary, and appropriate.

Reading therapy notes

Scrutinizing Physical Therapy notes is an expected part of a case manager's job description. The case manager might need to estimate return to work dates or provide assistance in preparing the patient for return to work. Often, the case manager can provide input to the physician regarding their therapy. All too often this task becomes a struggle as medical terminology, medical abbreviations and what appears to be pure hieroglyphics get in the way.

Most physical therapy notes are written in a basic S.O.A.P. note format. The S.O.A.P. standing for Subjective, Objective, Analysis/Assessment and Plan. While not always defined by the letter, most PT notes will contain the S.O.A.P. information within the note. The case manager should be able to not only read the note, but interpret whether the correct course of action is being followed.

Clinical Management Notes and Case Histories in Cardiopulmonary Physical Therapy W. Darlene Reid, Frank Chung, 2004 Two primary components present in Clinical Management Notes and Case Histories in Cardiopulmonary Physical Therapy are notes on cardiopulmonary assessment and management and case histories involving respiratory and cardiovascular conditions commonly viewed by physical therapists. Accompanying the notes are thought provoking questions and problems that enable the reader to establish a foundation of core concepts. The presentation of case histories further facilitates the development of integral skills and enables the reader to integrate those core concepts into a clinical setting. Also question and answer guides accompany the patient profiles.

Documentation for Rehabilitation Lori Quinn, James Gordon, 2015-12-11 Better patient management starts with better documentation. Documentation for Rehabilitation: A Guide to Clinical Decision Making in Physical Therapy 3rd Edition shows how to accurately document treatment progress and patient outcomes. Designed for use by rehabilitation professionals, documentation guidelines are easily adaptable to different practice settings and patient populations. Realistic examples and practice exercises reinforce concepts and encourage you to apply what you've learned. Written by expert physical therapy educators Lori Quinn and James Gordon, this book will improve your skills in both documentation and clinical reasoning. A practical framework shows how to organize and structure PT records, making it easier to document functional outcomes in many practice settings and is based on the International Classification for Functioning, Disability and Health (ICF) model, the one adopted by the APTA. Coverage of practice settings includes documentation examples in acute care, rehabilitation, outpatient, home care, and nursing homes, as well as a separate chapter on documentation in pediatric settings. Guidelines to systematic documentation describe how to identify, record, measure, and evaluate treatment and therapies, especially important when insurance companies require evidence of functional progress in order to provide reimbursement. Workbook/textbook format uses examples and exercises in each chapter to reinforce your understanding of concepts.

NEW Standardized Outcome Measures chapter leads to better care and patient management by helping you select the right outcome measures for use in evaluations, re-evaluations, and discharge summaries.
