Mabel Ann Brown,2017-08-15 The Shifting Global World of Youth and Education explores how increasing migration and
population changes are having an unprecedented impact on global education Given that the number of children of migrant
background is growing internationally there is a need for increasing awareness of the educational attainment and cultural
integration of this population group This book presents international perspectives on migration and youth and analyses what
kinds of effects such demographic changes are having on educational systems around the world The chapters in this volume
provide a fascinating insight into how countries around the world are dealing with loss or growth in their young population as
well as changes to their education systems Written by specialist academics from the relevant country the book covers Cuba
Lithuania the United Kingdom the United States Finland Greece Germany Austria Hungary Latvia China Australia India Italy
and Poland Taking into consideration the countries social and political context the chapters discuss educational issues
surrounding curriculum assessment and the opportunities available for the support of young people Conclusions are drawn
about what could be done in the future for the benefit of both the migrant and the existing populations The Shifting Global
World of Youth and Education will be of great interest to academics researchers and postgraduate students in the disciplines
of education sociology political sciences and social work The book will also give secondary teachers teaching assistants social
workers and youth workers the opportunity to reflect on their role within a national and international context *How We
Teach Science* John L. Rudolph,2019-06-01 A former Wisconsin high school science teacher makes the case that how and why
we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question
will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no
enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the
basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the
structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works
Everyone also agrees that students and the public more generally should understand the methods used to gain this
knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled
with that question Through the years they ve advanced an assortment of strategies ranging from the laboratory method to
the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was
influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation
and scientific inquiry was seen to contribute to an individual s intellectual and moral improvement while in others it was
viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and

teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public Interest in Mathematics and Science Learning Ann Renninger, Martina Nieswandt, Suzanne Hidi, 2015-04-19 Interest in Mathematics and Science Learning edited by K Ann Renninger Martin Nieswandt and Suzanne Hidi is the first volume to assemble findings on the role of interest in mathematics and science learning As the contributors illuminate across the volume s 22 chapters interest provides a critical bridge between cognition and affect in learning and development This volume will be useful to educators researchers and policy makers especially those whose focus is mathematics science and technology education Universal Access in Human-Computer Interaction: Universal Access to Information and Knowledge Constantine Stephanidis, Margherita Antona, 2014-05-15 The four volume set LNCS 8513 8516 constitutes the refereed proceedings of the 8th International Conference on Universal Access in Human Computer Interaction UAHCI 2014 held as part of the 16th International Conference on Human Computer Interaction HCII 2014 held in Heraklion Crete Greece in June 2014 jointly with 14 other thematically similar conferences The total of 1476 papers and 220 posters presented at the HCII 2014 conferences was carefully reviewed and selected from 4766 submissions These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems The papers thoroughly cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of application areas The total of 251 contributions included in the UAHCI proceedings were carefully reviewed and selected for inclusion in this four volume set The 65 papers included in this volume are organized in the following topical sections access to mobile interaction access to text documents and media access to education and learning access to games and ludic engagement and access to culture *Creating Stellar Lessons with Digital Tools* Kenneth J.
