Color Vision Sensation and Perception Marcelo Fernandes Costa, 2016-09-15 Color vision is considered a microcosm of the visual science. Special physiological and psychological processes make this scientific topic an intriguing and complex research field that can aggregate around molecular biologists, neurophysiologists, physicists, psychophysicists, and cognitive neuroscientists. Our purpose is to present the frontier knowledge of this area of visual science showing in the end the future prospects of application and basic studies of color perception. Stem, steam, computational thinking and coding: Evidence-based research and practice in children's development Stamatis Papadakis, Michail Kalogiannakis, Ali Ibrahim Can Gözümlü, 2023-03-13 **Commerce, Justice, Science, and Related Agencies Appropriations for 2014** United States. Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2013 *Energy and Water Development Appropriations for 2017: Department of Energy: Secretary of Energy* United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development, 2016 **Computer Science in Industrial Application** Yanglv Ling, 2015-07-28 CSIA 2014 focusses on improvements in computer science in industrial application. The contributions are grouped into five main sections: 1. Computer and Information Technology, 2. Business management, E-commerce, and Tourism. This section covers mainly basic theory and general method of economic management, businesses, and market economy. *Biographies in the History of Physics* Christian Forstner, Mark Walker, 2020-07-22 This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects, institutions, and concepts. What is a biography? Can biographies also be written for non-human subjects like scientific instruments, institutions, or concepts? The respective chapters of this book discuss these controversial questions using examples from the history of physics. By approaching biography as metaphor, it transcends the boundaries between various perspectives on the history of physics and enriches our grasp of the past. **Vaccine Hesitancy** Maya J. Goldenberg, 2021-03-09 The public has voiced concern over the adverse effects of vaccines from the moment Dr. Edward Jenner introduced the first smallpox vaccine in 1796. The controversy over childhood immunization intensified in 1998 when Dr. Andrew Wakefield linked the MMR vaccine to autism. Although Wakefield's findings were later discredited and retracted, and medical and scientific evidence suggests routine immunizations have significantly reduced life-threatening conditions like measles, whooping cough, and polio, vaccine refusal and vaccine-preventable outbreaks are on the rise. This book explores vaccine hesitancy and refusal among parents in the industrialized North. Although biomedical, public health, and popular science literature has focused on a scientifically ignorant public, the real problem, Maya J. Goldenberg argues, lies not in misunderstanding but in mistrust. Public confidence in scientific institutions and government bodies has been shaken by fraud, research scandals, and misconduct. Her book reveals how vaccine studies sponsored by the pharmaceutical industry, compelling rhetorics from the anti-vaccine movement, and the spread of populist knowledge on social media have all

contributed to a public mistrust of the scientific consensus. Importantly, it also emphasizes how historical and current discrimination in health care against marginalized communities continues to shape public perception of institutional trustworthiness. Goldenberg ultimately reframes vaccine hesitancy as a crisis of public trust rather than a war on science, arguing that having good scientific support of vaccine efficacy and safety is not enough. In a fraught communications landscape, Vaccine Hesitancy advocates for trust-building measures that focus on relationships, transparency, and justice.

Disrupt Science Mihai Nadin, 2023-11-18. Reaction to breakdowns is more expensive by many orders of magnitude than prevention. This again became clear during the COVID-19 pandemic and is evinced in the sustainability crisis. The dynamics of living matter transcend deterministic reaction. Embodied in machines, determinism empowered the human being, providing the path to prosperity. However, in conjunction with reductionism, it does away with complexity in which life is couched. The living is, by necessity, anticipatory. Awareness of the future means preserving life not in reaction to but in anticipation of change. Living entities, from the simplest bacteria to plants and insects to human beings, are adaptive, goal-oriented, and capable of self-healing. Anticipatory actions are expressed through non-deterministic processes that unfold in concert with reactions. They engage the wholeness of life, including its interactions with the environment. Awareness of consequences, together with memory of the past, informs actions that reflect the creative nature of human beings. Redefining science and, implicitly, medicine, is not a negation of its past but rather an affirmation of trust in explaining life's capacity to renew itself. As opposed to increasingly expensive medicine as a practice of repair to prevent and to heal, is to make life sustainable. The moment of truth can no longer be postponed. At stake is the future of humankind and even of life on planet Earth. Reductionist determinism informs the obsession with progress at any cost. Awareness of the fact that the human condition transcends that of the matter in which it is embodied explains and indeed justifies the call to Disrupt Science in its current state. The age of the digital machine, in particular of artificial intelligence, is one of opportunities that pale when compared to its inherent risks. The record of breakdowns, including so-called natural disasters, by now global in scale, is part of the empirical premise for the call for completing the Cartesian Revolution. A Second Revolution in Science could unleash humanity's remaking, free of surrendering to want. Science has the opportunity not only to measure everything, life included, and accumulate data and process it for its own sake but also to realize its meaning. The book cover is designed by Baruch Gorkin, who is celebrated internationally for exquisite typefaces and for books reflecting meaning-driven design.

Racial Segregation and Eugenical Science Between the Wars Michael L. Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of

slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies
