International Handbook of the Religious, Moral and Spiritual Dimensions in Education Marian de Souza, Gloria Durka, Kathleen Engebretson, Robert Jackson, Andrew McGrady, 2007-06-04 Traditionally spirituality has resided and been contained within religious frameworks but while the links between the two areas are still acknowledged by many in the contemporary world spirituality is perceived by some as an aspect of human life that is distinct from religion Consequently many are searching for meaning within and without religious traditions today and seeking answers to ethical and moral questions that have been generated by the knowledge and technological explosion One outcome is the renewed interest in the religious spiritual and moral dimensions of education throughout the life cycle This International Handbook presents the research and professional practice of scholars who are daily engaged in the consideration of these dimensions in education The result is a collection of essays which reflects the discipline in all of its internationality as it is today Embedded within the chapters is also an agenda for the future where the religious moral and spiritual dimensions in education are proposed as an exciting and challenging way forward for educators at all levels in society As well it offers a vision for the emergence of a peaceful and just world

Unifying Biology Vassiliki Betty Smocovitis, 1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of

evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

Cognitive Patterns in Science and Common Sense Theo A.F. Kuipers, Anne Ruth Mackor, 2023-03-13 This collection of 17 articles offers an overview of the philosophical activities of a group of philosophers who have been working at the Groningen University The meta methodological assumption which unifies the research of this group holds that there is a way to do philosophy which is a middle course between abstract normative philosophy of science and descriptive social studies of science On the one hand it is argued with social studies of science that philosophy should take notice of what scientists actually do On the other hand however it is claimed that philosophy can and should aim to reveal cognitive patterns in the processes and products of scientific and common sense knowledge Since it is thought that

those patterns can function as guidelines in new research and or in research in other disciplines philosophy can nevertheless hold on to the normative aim which is characteristic of classical philosophy of science Compared to this common assumption there is a diversity of subjects Some papers deal with general problems of science knowledge cognition and argumentation others with topics relating to foundational problems of particular sciences Therefore this volume is of interest to philosophers of science to philosophers of knowledge and argumentation in general to philosophers of mind as well as for scientists working in the physical and applied sciences biology psychology and economy who are interested in the foundations of their disciplines After a foreword by Leszek Nowak and a general introduction by the editors the book is divided into four parts with special introductions I Conceptual Analysis in Service of Various Research Programmes Henk Zandvoort Rein Vos Rick Looijen Gerben Stavenga Ren e Dalitz II The Logic of the Evaluation of Arguments Hypotheses Default Rules and Interesting Theorems Erik Krabbe Theo Kuipers Alfons Keupink Maarten Janssen Yao Hua Tan Bert Hamminga III Three Challenges to the Truth Approximation Programme Sjoerd Zwart Hinne Hettema Theo Kuipers Roberto Festa IV Explicating Psychological Intuitions Anne Ruth Mackor Jeanne Peijnenburg Lex Guichard Michel ter Hark The Groningen research group was recently qualified by an official international assessment committee as one of the best philosophy research groups in the Netherlands

Frontiers of Historical Imagination Kerwin Lee Klein, 2023-11-15 The American frontier, a potent symbol since Europeans first stepped ashore on North America, serves as the touchstone for Kerwin Klein's analysis of the narrating of history. Klein explores the traditions through which historians, philosophers, anthropologists, and literary critics have understood the story of America's origin and the way those understandings have shaped and been shaped by changing conceptions of history. The American West was once the frontier space where migrating Europe collided with Native America, where the historical civilizations of the Old World met the nonhistorical wilds of the New. It was not only the cultural combat zone where American democracy was forged but also the ragged edge of History itself, where historical and nonhistorical defied and defined each other. Klein maintains that the idea of a collision between people with and without history still dominates public memory. But the collision, he believes, resounds even more powerfully in the historical imagination, which creates conflicts between narration and knowledge and carries them into the language used to describe the American frontier. In Klein's words: "We remain obscurely entangled in philosophies of history we no longer profess, and the very idea of America balances on history's shifting frontiers." The American frontier, a potent symbol since Europeans first stepped ashore on North America, serves as the touchstone for Kerwin Klein's analysis of the narrating of history.
