Rogers, 2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbits they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking *Physics for the Inquiring Mind* is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is **Uncovering Student Ideas in Physical Science, Volume 1** Page D. that this may be the same mechanism as matter is a form of energy But from this point the disagreements start Thus the unified model of fundamental interactions theory of everything remains out of reach The two currently leading theories the Standard Model of elementary particle physics and the General Theory of Relativity separately cover only part of the interactions Moreover they are incompatible since they proceed from hypotheses about different mechanisms However as they are considered impeccable dogmas that are both right generations of physicists tried to unify them without any success The thought that they may be both wrong is alien to the current mainstream of theoretical physics The author of the book breaks this taboo He shows the fallacy of both models and suggests that trying to unify them is a meaningless pursuit But criticism alone is not enough and we need to find a way out Instead of unifying old theories we can build a new theory that unifies physical phenomena In the first volume of the Symphony of Matter and Mind series the author begins to develop a model of a universal mechanism operating at all levels of matter and in all types of energy interactions thus indicating a way out of the impasse of theoretical physics

The Mind as a Scientific Object Christina E.
