

Goals

Overview of The Adolescent Brain Cognitive Development (ABCD) study

ABCD's Assessment Scheme

Findings to date

Genes vs. Environment: How the ABCD study is poised to address important questions regarding vulnerabilities and cause/effect associations

General agreement between parent and child reports

Intriguing that rates are higher in males vs. females

Will be important to follow the sample through the pubertal transition to see how these findings change over time and to assess behavioral correlates

There have been some attempts, using the baseline data, to explore correlates of depressive symptomatology.
