Scientific and Technical Aerospace Reports, 1980 *The Double Bind in Physics Education* Maria Ong, 2023-05-09 An incisive study of the mechanisms reinforcing the underrepresentation of women of color in STEM fields and a call for systemic change to address the imbalance In a detailed exploration of inclusion in physics social scientist Maria Ong makes the case for far reaching higher education reform noting that despite diversity efforts to recruit more women and students of color into science and mathematics programs many leave the STEM pipeline The Double Bind in Physics Education takes readers inside the issue by following 10 women of color from their entrance into the undergraduate physics program at a large research university through their pursuit of various educational and career paths Candid interviews with these women their instructors and mentors and their peers conducted over 25 years allow Ong to trace how pervasive challenges such as navigating the intersectionality of race and gender discrimination have shaped their academic opportunities and career choices Despite the ideals of objectivity promoted in STEM disciplines the women profiled here encounter continued patterns of systemic oppression within their departments In their stories Ong identifies overt behaviors and microaggressions that harass exclude and otherwise disadvantage women of color and members of other minoritized groups Ong also shows how aids such as student support programs peer groups allies and mentors which are centered on the individual can go only so far toward a sustainable solution In order to provide equitable opportunities she argues greater work must be done to dismantle institutional norms and replace them with a culture of inclusion **Books and Pamphlets, Including Serials and Contributions to Periodicals** Library of Congress. Achieving Science with CubeSats National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Achieving Science Goals with CubeSats, 2016-11-06 Space based observations have transformed our understanding of Earth its environment the solar system and the universe at large During past decades driven by increasingly advanced science questions space observatories have become more sophisticated and more complex with costs often growing to billions of dollars Although these kinds of ever more sophisticated missions will continue into the future small satellites ranging in mass between 500 kg to 0.1 kg are gaining momentum as an additional means to address targeted science questions in a rapid and possibly more affordable manner Within the category of small satellites CubeSats have emerged as a space platform defined in terms of 10 cm x 10 cm x 10 cm sized cubic units of approximately 1.3 kg each called U.S. Historically CubeSats were developed as training projects to expose students to the challenges of real world engineering practices and system design Yet their use has rapidly spread within academia industry and government agencies both nationally and internationally In particular CubeSats have caught the attention of parts of the U.S. space science community which sees this platform despite its inherent constraints as a way to affordably access space and perform unique measurements of scientific value The first science results from such CubeSats have only recently become available however questions remain regarding the scientific potential and technological promise of CubeSats in the future

Achieving Science with CubeSats reviews the current state of the scientific potential and technological promise of CubeSats. This report focuses on the platform's promise to obtain high priority science data as defined in recent decadal surveys in astronomy and astrophysics, Earth science and applications from space, planetary science and solar and space physics, heliophysics, the science priorities identified in the 2014 NASA Science Plan and the potential for CubeSats to advance biology and microgravity research. It provides a list of sample science goals for CubeSats, many of which address targeted science often in coordination with other spacecraft or use sacrificial or high risk orbits that lead to the demise of the satellite after critical data have been collected. Other goals relate to the use of CubeSats as constellations or swarms, deploying tens to hundreds of CubeSats that function as one distributed array of measurements.

STAR, 1969 **Energy Research Abstracts**, 1993 **Towards Very Large Knowledge Bases** N. J. I. Mars, 1995

In the early days of artificial intelligence it was widely believed that powerful computers would in the future enable mankind to solve many real world problems through the use of very general inference procedures and very little domain specific knowledge. With the benefit of hindsight, this view can now be called quite naive. The field of expert systems, which developed during the early 1970s, embraced the paradigm that Knowledge is Power: even very fast computers require very large amounts of very specific knowledge to solve non-trivial problems. Thus the field of large knowledge bases has emerged.

Circadian Lighting Design in the LED Era Maurizio Rossi, 2019-02-06

This book explores how lighting systems based on LED sources have the ability to positively influence the human circadian system with benefits for health and well-being. The opening chapters examine the functioning of the human circadian system, its response to artificial lighting, potential health impacts of different types of light exposure and current researches in circadian photometry. A first case study analyzes the natural lighting available in an urban interior, concluding that it is unable to activate the human circadian system over the entire year. Important original research is then described in which systems suitable for artificial circadian lighting in residential interiors and offices were developed after testing of new design paradigms based on LED sources. Readers will also find a detailed analysis of the LED products available or under development globally that may contribute to

optimal artificial circadian lighting as well as the environmental sensors control interfaces and monitoring systems suitable for integration with new LED lighting systems Finally guidelines for circadian lighting design are proposed with identification of key requirements **Limited Scientific and Technical Aerospace Reports** ,1972
