Student Misconceptions and Errors in Physics and Mathematics Teresa Neidorf, Alka Arora, Ebru Erberber, Yemurai Tsokodayi, Thanh Mai, 2019-10-30 This open access report explores the nature and extent of students misconceptions and misunderstandings related to core concepts in physics and mathematics and physics across grades four eight and 12 Twenty years of data from the IEA s Trends in International Mathematics and Science Study TIMSS and TIMSS Advanced assessments are analyzed specifically for five countries Italy Norway Russian Federation Slovenia and the United States who participated in all or almost all TIMSS and TIMSS Advanced assessments between 1995 and 2015 The report focuses on students understandings related to gravitational force in physics and linear equations in mathematics It identifies some specific misconceptions errors and misunderstandings demonstrated by the TIMSS Advanced grade 12 students for these core concepts and shows how these can be traced back to poor foundational development of these concepts in earlier grades Patterns in misconceptions and misunderstandings are reported by grade country and gender In addition specific misconceptions and misunderstandings are tracked over time using trend items administered in multiple assessment cycles The study and associated methodology may enable education systems to help identify specific needs in the curriculum improve inform instruction across grades and also raise possibilities for future TIMSS assessment design and reporting that may provide more diagnostic outcomes

Multiple Representations in Physics Education David F. Treagust, Reinders Duit, Hans E. Fischer, 2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation

is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way **The Content Of Science: A Constructivist Approach To Its Teaching And learning** Australia.
