Physics 9B Lab Text, Section 6.1

II. Cyclic Processes

1. A system undergoes a process that completes a full cycle, driven by two thermal reservoirs. On the PV diagram of this cyclic process, the path through states follows a *clockwise* direction. Determine which of the following statements are true and which are false, and give a short explanation in each case:
 - a. The system ends up with more energy than it started with.
 - b. The warmer reservoir loses the same amount of heat energy that the cooler reservoir gains.
 - c. Energy that used to be thermal has been converted into mechanical (i.e. work).
2. A piston raises a weight, then lowers it again to its original height. If the process the system follows as the piston rises is isothermal, and as it falls is isobaric, then is the work done by the gas positive, negative, or zero? Explain.
