Research in Building Physics and Building Engineering Paul Fazio, Hua Ge, Ji Wu Rao, Guylaine

Desmarais, 2020-11-26 Buildings influence people. They account for one third of energy consumption across the globe and represent an annual capital expenditure of 7%–10% of GNP in industrialized countries. Their lifetime operation costs can exceed capital investment. Building Engineering aims to make buildings more efficient, safe, and economical. One branch of this discipline, Building Physics Science, has gained prominence with a heightened awareness of such phenomena as sick buildings, the energy crisis, and sustainability, and considering the performance of buildings in terms of climatic loads and indoor conditions. The book reflects the advanced level and high quality of research which Building Engineering and Building Physics Science in particular have reached at the beginning of the twenty-first century. It will be a valuable resource to engineers, architects, building scientists, consultants, on the building envelope, researchers, and graduate students.

Extended Selected Papers of the 14th International Conference on Information, Intelligence, Systems, and Applications

Nikolaos Bourbakis, George A. Tsihrintzis, Maria Virvou, Lakhmi C. Jain, 2024-08-13 This book includes extended versions of selected research works that were presented at the 14th International Conference on Information Intelligence Systems and Applications IISA2023 Volos, Greece, 10–12 July 2024. <https://www.easyacademia.org/iisa2023> along with additional relevant papers by invited authors. Information is widely available and accessible but frequently leads to information overload and overexposure, and the effort for coding, storing, hiding, securing, transmitting, and retrieving it may be excessive. Intelligence, inspired by biological and other paradigms, is required to manage information and extract knowledge from it. Information and multimedia systems with an increasing level of intelligence are being developed that incorporate these advances. As a result, new technologies, protocols, and novel applications are emerging. In turn, the novel applications lead to the collection of new information, and the Information Intelligence Systems Applications circle is repeated at ever higher levels. These works cover a broad spectrum of topics from both novelties in theory and advanced methodologies as well as novel applications in energy, agriculture, medicine, forensics, healthcare, education, tourism, inspection, traffic, and software engineering. Targeted towards academicians, researchers, practitioners, and students in computer science and artificial intelligence, this work is also accessible to individuals from other disciplines interested in the cutting-edge developments of information intelligence systems and applications. An extensive list of bibliographic references at the end of each chapter guides the readers to probe deeper into the application areas of interest to them. *Building Performance Simulation for Design and Operation* Jan L.M. Hensen, Roberto Lamberts, 2019-04-24 When used appropriately, building performance simulation has the potential to reduce the environmental impact of the built environment, to improve indoor quality and productivity, as well as to facilitate future innovation and technological progress in construction. Since publication of the first edition of *Building Performance Simulation for Design and Operation*, the discussion has shifted from a focus on software features to a new agenda which

centres on the effectiveness of building performance simulation in building life cycle processes This new edition provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition and from a single building to district level It contains new chapters on building information modelling occupant behaviour modelling urban physics modelling urban building energy modelling and renewable energy systems modelling This new edition keeps the same chapter structure throughout including learning objectives chapter summaries and assignments Moreover the book Provides unique insights into the techniques of building performance modelling and simulation and their application to performance based design and operation of buildings and the systems which service them Provides readers with the essential concepts of computational support of performance based design and operation Provides examples of how to use building simulation techniques for practical design management and operation their limitations and future direction It is primarily intended for building and systems designers and operators and postgraduate architectural environmental or mechanical engineering students

Expanding Boundaries: Systems Thinking in the Built Environment Guillaume Habert, Arno Schlueter, 2016-08-15 Consuming over 40% of total primary energy the built environment is in the centre of worldwide strategies and measures towards a more sustainable future To provide resilient solutions a simple optimisation of individual technologies will not be sufficient In contrast whole system thinking reveals and exploits connections between parts Each system interacts with others on different scales materials components buildings cities and domains ecology economy and social Whole system designers optimize the performance of such systems by understanding interconnections and identifying synergies The more complete the design integration the better the result In this book the reader will find the proceedings of the 2016 Sustainable Built Environment SBE Regional Conference in Zurich Papers have been written by academics and practitioners from all continents to bring forth the latest understanding on systems thinking in the built environment

Mechanical Properties, 1978 *Micromanufacturing Engineering and Technology* Yi Qin, 2015-05-08 *Micromanufacturing Engineering and Technology* Second Edition covers the major topics of micro manufacturing The book not only covers theory and manufacturing processes but it uniquely focuses on a broader range of practical aspects of micro manufacturing engineering and utilization by also covering materials tools and equipment manufacturing system issues control aspects and case studies By explaining material selection design considerations and economic aspects the book empowers engineers in choosing among competing technologies With a focus on low cost and high volume micro manufacturing processes the updated title covers technologies such as micro mechanical cutting laser machining micro forming micro EDM micro ECM hot embossing micro injection molding laser micro sintering thin film fabrication inkjet technology micro joining multiple processes machines and more Edited by one of the few world experts in this relatively new but rapidly expanding area and presenting chapters written by a 40 strong team of leading industry specialists this book is an invaluable source of information for engineers R D researchers and academics Covers key micro manufacturing technologies

Delamination in Wood, Wood Products and Wood-Based Composites Voichita Bucur,2010-11-02 In the last quarter century delamination has come to mean more than just a failure in adhesion between layers of bonded composite plies that might affect their load bearing capacity Ever increasing computer power has meant that we can now detect and analyze delamination between for example cell walls in solid wood This fast moving and critically important field of study is covered in a book that provides everyone from manufacturers to research scientists the state of the art in wood delamination studies Divided into three sections the book first details the general aspects of the subject from basic information including terminology to the theoretical basis for the evaluation of delamination A settled terminology in this subject area is a first key goal of the book as the terms which describe delamination in wood and wood based composites are numerous and often confusing The second section examines different and highly specialized methods for delamination detection such as confocal laser scanning microscopy light microscopy scanning electron microscopy and ultrasonics Ways in which NDE non destructive evaluation can be employed to detect and locate defects are also covered The book s final section focuses on the practical aspects of this defect in a wide range of wood products covering the spectrum from trees logs laminated panels and glued laminated timbers to parquet floors Intended as a primary reference this book covers everything from the microscopic anatomical level of delamination within solid wood sections to an examination of the interface of wood and its surface coatings It provides readers with the perspective of industry as well as laboratory and is thus a highly practical sourcebook for wood engineers
