

Study Guide for the Energy Test

Energy is the ability to do work.

Kinetic and Potential Energy

Potential Energy- stored energy, an object at rest and not in motion

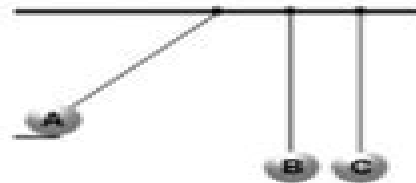

(a rock on the edge of a cliff, a ball sitting on a shelf, water behind a dam)

- You can change the potential energy by changing its height or its shape.
- The greater the height above the ground, the more potential energy the object will have.
- The more potential energy something has, the more kinetic energy it will have.

Kinetic Energy- energy of motion (a ball moving through the air, a person running)

- The amount of kinetic energy depends on an object's mass and speed.
- The larger the mass of the object or the greater the object's speed, the more kinetic energy the object will have.

Examples of Potential and Kinetic Energy

When ball A is dropped gravitational potential changes into kinetic energy.

At point 1 the train has the greatest potential energy.
