This book is about mathematics in physics education: the difficulties students have in learning physics and the way in which mathematization can help to improve physics teaching and learning. The book brings together different teaching and learning perspectives and addresses both fundamental considerations and practical aspects. Divided into four parts, the book starts out with theoretical viewpoints that enlighten the interplay of physics and mathematics, also including historical developments. The second part delves into the learners' perspective. It addresses aspects of the learning by secondary school students as well as by students just entering university or teacher students. Topics discussed range from problem solving over the role of graphs to integrated mathematics and physics learning. The third part includes a broad range of subjects from teachers' views and knowledge, the analysis of classroom discourse and an evaluated teaching proposal. The last part describes approaches that take up mathematization in a broader interpretation and includes the presentation of a model for physics teachers.
