Nepali Guide Class Maths:

A Guide to the Literature on Semirings and their Applications in Mathematics and Information Sciences K.

Glazek, 2013-06-29 This volume presents a short guide to the extensive literature concerning semirings along with a complete bibliography. The literature has been created over many years in variety of languages by authors representing different schools of mathematics and working in various related fields. In many instances the terminology used is not universal which further compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results. So far there has been no single reference that could guide the interested scholar or student to the relevant publications. This book is an attempt to fill this gap. My interest in the theory of semirings began in the early sixties when together with Bogdan W. Glogz I tried to investigate some algebraic aspects of compactifications of topological spaces, semirings of semicontinuous functions and the general ideal theory for special semirings. Unfortunately local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed. However some time later we became aware of some similar investigations having already been done. The theory of semirings has remained my first love ever since and I have been interested in the results in this field that have been appearing in literature even though I have not been active in this area myself.

It serves as a valuable contribution in this domain by making reports on recent developments in this field available to the international educational community with a special focus on relevant research results since 2000. The 18 chapters of the book are divided into five interrelated parts that underlie the central issues of research in this domain: 1 Theoretical and conceptual frameworks for integrating history and epistemology in mathematics in mathematics education 2 Courses and didactical material Design implementation and evaluation 3 Empirical investigations on implementing history and epistemology in mathematics education 4 Original historical sources in teaching and learning of and about mathematics 5 History and epistemology of mathematics. Interdisciplinary teaching and sociocultural aspects. This book covers all levels of education from primary school to tertiary education with a particular focus on teacher education. Additionally each chapter refers to and/or is based on empirical research in order to support illuminate clarify and evaluate key issues main questions and conjectured theses raised by the authors or in the literature on the basis of historical epistemological or didactical cognitive arguments.
