Open Source Systems: Adoption and Impact Ernesto Damiani, Fulvio Frati, Dirk Riehle, Anthony I. Wasserman, 2015-04-16
This book constitutes the refereed proceedings of the 11th International IFIP WG 2.13 International Conference on Open Source Systems OSS 2015 held in Florence Italy in May 2015. The 16 revised full papers presented were carefully reviewed and selected from 50 submissions. They have been organized in the following topical sections: open source software, engineering, communication and collaboration examples and case studies, adoption, use and impact, and intellectual property and legal issues. Also included is an OSS 2015 PhD contest paper. *Energy Research Abstracts*, 1985 *Scientific and Technical Aerospace Reports*, 1990 *Environmental Pollution Research*, 2002 **Resources in Education**, 1972

EPA Publications Bibliography United States. Environmental Protection Agency, 1997 **Zero Waste** Ashok Rathore, 2019-08-30 *Zero Waste Management Practices for Environmental Sustainability* presents approaches for resource management centered on reducing waste and reusing and recycling materials. It aims to save energy by reducing energy consumption associated with extracting, processing and transporting raw materials and waste, and also to reduce and eventually eliminate the need for landfills and incinerators. This book presents the various principles, methods and tools that can be used to address different issues in the areas of industrial waste reduction and sustainability. It examines how to eliminate waste at the source and at all points of a supply chain and how to shift from the current one-way linear resource model to a sustainable closed-loop system. Proposes strategies for businesses to reduce and reuse waste with a goal of reaching a zero waste status. Focuses on how mitigating waste and promoting recycling can save vast amounts of energy. Explains how the zero waste approach would be a key measure to ensure environmental sustainability and help to offset global climate change. *Environment Abstracts*, 1983 **Research in Education**, 1972 *Unit Manufacturing Processes* National Research Council, Division on Engineering and Physical Sciences, Board on Manufacturing and Engineering Design, Commission on Engineering and Technical Systems, Unit Manufacturing Process Research Committee, 1995-01-03. Manufacturing reduced to its simplest form involves the sequencing of product forms through a number of different processes. Each individual step, known as a unit manufacturing process, can be viewed as the fundamental building block of a nation's manufacturing capability. A committee of the National Research Council has prepared a report to help define national priorities for research in unit processes. It contains an organizing framework for unit process families, criteria for determining the criticality of a process or manufacturing technology, examples of research opportunities, and a prioritized list of enabling technologies that can lead to the manufacture of products of superior quality at competitive costs. The study was performed under the sponsorship of the National Science Foundation and the Defense Department's Manufacturing Technology Program. *Catalog of National Bureau of Standards Publications, 1966-1976* United States. Morehouse,1978 **Energy** Pardeep Singh,Suruchi Singh,Gaurav Kumar,Pooja Baweja,2021-09-06 Energy Global energy demand has more than doubled since 1970 The use of energy is strongly related to almost every conceivable aspect of development wealth health nutrition water infrastructure education and even life expectancy itself are strongly and significantly related to the consumption of energy per capita Many development indicators are strongly related to per capita energy consumption Fossil fuel is the most conventional source of energy but also increases greenhouse gas emissions The economic development of many countries has come at the cost of the environment However it should not be presumed that a reconciliation of the two is not possible The nexus concept is the interconnection between the resource energy water food land and climate Such interconnections enable us to address trade offs and seek synergies among them Energy water food land and climate are essential resources of our natural environment and support our quality of life Competition between these resources is increasing globally and is exacerbated by climate change Improving resilience and securing resource availability would require improving resource efficiency Many policies and programs are announced nationally and internationally for replacing the conventional mode and also emphasizing on conservation of fossil fuels and reuse of exhausted energy so a gap in implications and outcomes can be broadly traced by comparing the data This book aims to highlight problems and solutions related to conventional energy utilization formation and multitudes of ecological impacts and tools for the conservation of fossil fuels The book also discusses modern energy services as one of the sustainable development goals and how the pressure on resource energy disturbs the natural flows The recent advances in alternative energy sources and their possible future growth are discussed and on how conventional energy leads to greenhouse gas formation which reduces energy use efficiency The different policies and models operating is also addressed and the gaps that remained between them Climate change poses a challenge for renewable energy and thus it is essential to identify the factors that would reduce the possibility of relying on sustainable energy sources This book will be of interest to researchers and stakeholders students industries NGOs and governmental agencies directly or indirectly associated with energy research
