1. What is the primary purpose of cloud computing?
2. Which of the following is NOT a characteristic of cloud computing?
3. What is the main benefit of using cloud storage?
4. Which of the following is a common security concern with cloud computing?
5. What is the term for the process of moving data and applications to the cloud?

Abstract *—* This paper presents a new approach to the problem of finding the best way to represent a set of data. The approach is based on the idea of using a set of basis functions to represent the data. The basis functions are chosen such that they are orthogonal to each other and to the data. The data is then represented as a linear combination of the basis functions. The coefficients of the linear combination are found by minimizing the error between the data and the representation. The error is defined as the sum of the squares of the differences between the data and the representation. The method is applied to a set of data representing the output of a system. The results show that the method is able to find a good representation of the data.
