V. Skobel'syn,2013-03-08 *Methodological Issues in Consciousness Research, volume II* Axel Cleeremans,2025-04-16 This Research Topic is the second volume of the Research Topic Methodological Issues in Consciousness Research Please see the first volume here The simplest and perhaps the first notion of consciousness in the West as a sentience or awareness of internal or external existence was introduced in the Seventeenth century by the English physician Robert Fludd though similar and even more refined notions of consciousness were developed centuries before in Indian philosophy and contemplative wisdom traditions Because it permeates human existence in so many different ways the study of consciousness is a profoundly interdisciplinary endeavour and engages disciplines such as philosophy including Eastern philosophy cognitive neuroscience anthropology psychiatry and psychopathology and even physics The study of consciousness may involve domains as diverse as perceptual awareness cognition and metacognition reasoning

executive control theory of mind self sleep and dreaming emotional competence and empathy It concerns both healthy e g aging meditation spiritual experiences and pathological conditions e g epilepsy neglect and locked in syndromes minimally conscious states anesthesia and involves considerations operating at different time scales e g evolution development expertise Today however and despite almost thirty years of concerted interdisciplinary efforts the nature and mechanisms of consciousness remain as elusive as ever Theoretically different conceptual frameworks aimed at characterizing both its functional and phenomenal aspects take sometimes radically different assumptions as their starting point but often fail to make sufficiently precise differential predictions to be falsifiable While most recent views generally consider methods investigating human higher order reflective or access consciousness the theoretical and experimental foundations of primary proto consciousness often remain vague and ignore evolutionary considerations Influential distinctions such as the distinction between phenomenal and access consciousness between pre reflective minimal and the reflective narrative self between graded and all or none processing or even between conscious and unconscious processing all remain unsettled or controversial The field is also rife with methodological challenges and controversies some of which remain largely unsolved Questions such as how to best measure awareness or to how establish its absence issues such as what kind of neuroscientific data would convincingly make it possible to isolate the neural correlates of consciousness or what types of confounds contaminate extant findings challenges such as how to imagine crucial experiments that are sufficiently sensitive to falsify some theoretical proposals all need to be addressed in open interdisciplinary dialogue This Frontiers Research Topic is aimed at stimulating discussion about current methodological issues and trends in consciousness research We welcome theoretical and empirical contributions as well as empirical articles from both experts and young scientists who work in the field of consciousness research Submissions of related hypotheses original research articles case reports perspectives reviews opinions and commentaries are welcome We very much hope that this Frontiers Research Topic will contribute to enhancing our characterization and understanding of the methodological and conceptual challenges associated with the study of human consciousness
