Fischer,2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way Optimizing the U.S. Ground-Based Optical and Infrared Astronomy System

Geoethics S. Peppoloni,G. Di Capua ,2015-08-24 This Special Publication will be an important tool for geoscientists aimed at increasing the awareness of their societal role and responsibility in conducting education

research and practice activities What are the responsibilities of a geoscientist And what motivations are needed to push geoscientists to practice the Earth sciences in an ethical way The major environmental challenges affecting human communities require not only a strictly scientific and technical preparation by the geoscientists but also a reflection on their broader obligations towards society It is important that geoscientists consider geoethics as an indispensable framework on which to base their training and activity The principles of geoethics can guide them to pursue the common good by weighing the benefits and costs of each choice and identifying eco friendly and society friendly solutions that guarantee the respect of the right balance between human life and the dynamics of the Earth Communication and dissemination of geosciences should become core activities in building a knowledge based society which is able better to protect itself and the Earth ecosystems in order to guarantee a life in harmony with our planet for future generations
