students or professionals who are looking to contribute to the conversation *Strategic Management in Public Services Organizations* Ewan Ferlie, Edoardo Ongaro, 2015-02-20 *Strategic Management in Public Services Organizations* sets out to connect the two traditionally disparate academic literatures of public management and strategic management. The authors argue that some models of strategic management are now of enhanced relevance for contemporary public services organizations especially when considering successive New Public Management reforms. This observation has important consequences for the requisite work practices, skills and knowledge bases of current public managers as they are increasingly being asked to act as strategic as well as operational managers. *Strategic Management in Public Services Organizations* takes a strongly comparative and international perspective in addressing the fundamental issue of strategic management within diverse public administrative traditions. The impact of strategic management on the performance of public agencies is examined and it is argued that the appropriate use of strategic management models depends on the politico-administrative and cultural contexts of the public services organization in question, concluding that there is no single best way to strategically lead public organisations. This is an advanced textbook aimed at the postgraduate level, particularly students on MPAs and MBAs with a public sector option or MScs in Public Policy and Public Management.

Complementarity Beyond Physics (1928-1962) D. Favrholt, 2013-10-22 This volume is divided into five parts. The title of the volume refers primarily to part I which is by far the largest and comprises papers discussing the fundamental questions of biology and related psychological and philosophical problems. Following the reproduction of papers brought to publication by Bohr, there is a separate Appendix to Part I including some of Bohr's most interesting and substantive unpublished contributions in this area. The papers in Part I span the last thirty years of Bohr's life and display his great interest in biological problems and his unrelenting efforts to show that biology cannot be reduced to physics and chemistry. Part II contains articles of a more general cultural interest. Some of these show that Bohr regarded the complementary perspective to be of value also outside the scientific sphere. Part III contains the articles Bohr wrote about the great Danish philosopher Harald Høffding. These short papers are presented in a section on their own because of the continuing discussion in the history of science about Høffding's possible influence on Bohr's work in physics and his whole scientific approach. Part IV comprises articles illuminating the history of 20th century physics. Bohr had great veneration for his predecessors and teachers and he prepared these articles with great care. Part V contains correspondence relating to the material in Parts I through IV. As in previous volumes, an inventory of relevant unpublished manuscripts held at the Niels Bohr Archive constitutes an appendix to the whole volume. **Applications of Quantum Mechanical Techniques to Areas Outside of Quantum Mechanics. 2nd Edition** Emmanuel Haven, Andrei Khrennikov, 2019-11-14 This book deals with applications of quantum mechanical techniques to areas outside of quantum mechanics, so-called quantum-like modeling. Research in this area has grown over the last 15 years. But even already more than 50 years ago the interaction between Physics Nobelists

Pauli and the psychologist Carl Jung in the 1950 s on seeking to find analogous uses of the complementarity principle from quantum mechanics in psychology needs noting This book does NOT want to advance that society is quantum mechanical The macroscopic world is manifestly not quantum mechanical But this rules not out that one can use concepts and the mathematical apparatus from quantum physics in a macroscopic environment A mainstay ingredient of quantum mechanics is quantum probability and this tool has been proven to be useful in the mathematical modelling of decision making In the most basic experiment of quantum physics the double slit experiment it is known from the works of A Khrennikov that the law of total probability is violated It is now well documented that several decision making paradoxes in psychology and economics such as the Ellsberg paradox do exhibit this violation of the law of total probability When data is collected with experiments which test non rational decision making behaviour one can observe that such data often exhibits a complex non commutative structure which may be even more complex than if one considers the structure allied to the basic two slit experiment The community exploring quantum like models has tried to address how quantum probability can help in better explaining those paradoxes Research has now been published in very high standing journals on resolving some of the paradoxes with the mathematics of quantum physics The aim of this book is to collect the contributions of world s leading experts in quantum like modeling in decision making psychology cognition economics and finance
