Burkett, 2006-04-20 In this book John P Burkett presents microeconomics as an evolving science interacting with mathematics psychology and other disciplines and offering solutions to a growing range of practical problems The book shows how early contributors such as Xenophon Ibn Khaldun and David Hume posed the normative and positive questions central to microeconomics It expounds constrained optimization techniques as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical behavior Applying these techniques the book introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments It gives extensive and innovative coverage of recent findings in cognitive psychology and behavioral economics which not only document behavior inconsistent with some traditional theories but also advance positive theories with superior predictive power

Ethics and Images of Pain Asbjørn Grønstad, Henrik Gustafsson, 2012-04-27

Few phenomena are as formative of our experience of the visual world as displays of suffering. But what does it mean to have an ethical experience of disturbing or traumatizing images? What kind of ethical proposition does an image of pain mobilize? How may the spectator learn from and make use of the painful image as a source of ethical reflection? Engaging with a wide range of visual media from painting, theatre and sculpture to photography, film and video, this interdisciplinary collection of essays by leading and emerging scholars of visual culture offers a reappraisal of the increasingly complex relationship between images of pain and the ethics of viewing. *Ethics and Images of Pain* reconsiders the persistent and ever pertinent nexus of aesthetics and ethics, the role of painful images as generators of unpredictable forms of affect, the moral transformation of spectatorship, the ambivalence of the witness and the representation of affliction as a fundamental form of our shared scopical experience. The instructive and illuminating essays in the collection introduce a phenomenological context in which to make sense of our current ecology of excruciating images, one that accentuates notions of responsibility, empathy and imagination. Contributors trace the images of pain across a miscellany of case studies and amongst the topics addressed are the work of artists as disparate as Doris Salcedo, Anselm Kiefer and Bendik Riis, photographs from Abu Ghraib and Rwanda, Hollywood war films and animated documentaries, performances of self-immolations and incidents of police brutality captured on mobile phones.
