

**Learning Objectives** Given what I have learned, and the graphs, can you explain or predict the following: growth rates, spatial or geographical patterns, factors affecting the rate of growth, density, age structure, and growth rates.

Types of Population Patterns		Factors	Graphs
Spatially Homogeneous		An organism is distributed evenly or homogeneously throughout its environment with few patterns.	
Spatially Heterogeneous	Clumped	An organism is distributed in a homogeneously distributed manner with few patterns.	
	Random	Randomly distributed	
	Uniform	Not homogeneously distributed in the environment is clumped.	

## Lesson Summary

### Describing Populations

**Abundance** refers to the number of individuals in a population. Ecologists study its patterning according to four geographic ranges: spatial, sex, among individuals, and age structure.

**Change after Change** They give us a population's size and age by geographic range. A population's change over time is usually caused by changes in the population's abundance or its density. Density is a population's abundance per unit area. Ecologists use the term "abundance" to refer to the number of individuals in a population of any size but use "density" when describing the change in abundance in a certain area.

**Growth Rate** The number of organisms in a population over time is a sign of growth. Growth rate is the number of organisms added to a population over a certain time period. Growth rate is the number of organisms added to a population over a certain time period.
