

Weather - An Introduction to Weather

by Heather

What does the word "weather" mean to you? Each person living here has his or her own idea of what the weather is. There are thousands of sunny days and rainy days, and there are even some days without any sun or rain. But do you know what actually makes weather? The answer is simple. Every day, we have different kinds of weather.

Let's describe a simple kind of weather. Weather is the state of the atmosphere at a given time and place. It is made up of many different things: temperature, humidity, wind speed and direction, and air pressure.

Temperature is the measure of how hot or cold the air is. When the sun comes out, it warms the air. When it goes away, the air cools. That is what the weather is. The weather is the state of the air. It is made up of many different things: temperature, humidity, wind speed and direction, and air pressure.

Humidity is the amount of water in the air. The air always has some water in it. Some days it is more humid than other days. That is what the weather is. The weather is the state of the air. It is made up of many different things: temperature, humidity, wind speed and direction, and air pressure.

Wind speed and direction are also part of the weather. They tell us how fast the air is moving. Sometimes the wind is strong, and sometimes it is weak. That is what the weather is. The weather is the state of the air. It is made up of many different things: temperature, humidity, wind speed and direction, and air pressure.

Air pressure is the force of the air. It is the weight of the air. When the air is heavy, it has a high pressure. When the air is light, it has a low pressure. That is what the weather is. The weather is the state of the air. It is made up of many different things: temperature, humidity, wind speed and direction, and air pressure.
