Rock Manual Ciria 2007:

The Rock Manual Construction Industry Research and Information Association, Civieltechnisch Centrum Uitvoering Research en Regelgeving (Netherlands), 2007 This publication is a summary of good practice on the use of rock in engineering works for rivers coasts and seas It has incorporated all the significant advances in knowledge that have occurred over the past 10 15 years

In the Shadow of the Seawall Summer Gray, 2023-08-29 In the Shadow of the Seawall journeys to the low lying lands of Guyana and the Maldives to grapple with the existential dilemma of seawalls alongside struggles to resist displacement With the gathering momentum of ocean instability wrought by centuries of injustice seawalls have become objects of conflict and negotiation around which human struggles for power and resistance collide Through stories of colonial ruination and green seawalls the concept of placekeeping emerges a justice oriented framework for addressing adaptation and the global dangers of coastal disruption at the front lines of climate change Drawing on ethnographic observation and interviews Gray shows how seawalls are entrenched in relationships of power and entangled in processes of making and keeping place

Scour Manual G.J.C.M. Hoffmans, H.J. Verheij, 2021-03-07 Ever since the publication in 1997 the original Scour Manual has helped many practising hydraulic engineers to deal with scour processes near hydraulic structures In recent years new insights such as probabilistic calculations offered new opportunities to design structures more economically These new insights are included in this update of the original Scour Manual which is focussing entirely on current related scour This manual provides the engineer with useful practical methods to calculate the dimensions of scour holes in the pre feasibility and preliminary stages of a project and gives an introduction to the most relevant literature This updated Scour Manual contains guidelines that can be used to solve problems related to scour in engineering practice and also reflects the main results of all research projects in the Netherlands in recent decades The so called Breusers equilibrium method has a central role which can basically be applied to all situations where local scour is expected The method allows to predict the scour depth as a function of time provided that the available knowledge about scour at the specific structure is sufficient For structures with insufficient knowledge available alternative scour prediction rules are presented The treatment of local scour is classified according to the different types of structures Each type of structure is necessarily schematised to a simple basic layout The main parameters of a structure and the main parts of the flow pattern near a structure are described briefly insofar they are relevant to the description of scour phenomena New scour formulas for the equilibrium scour have been elucidated Evaluating a balance of forces for a control volume it is possible to develop scour equations for different types of flow fields and structures i.e. jets abutments and bridge piers As many scour problems are still not fully understood attention is paid to the validity ranges and limitations of the formulas as well as to the accuracy of the scour predictions This information can also be used to carry out a risk assessment using a safety philosophy based on a probabilistic analysis or an approach with a safety factor Moreover the information on the

strength of soils is extended and aspects are addressed such as scour due to shear failures or flow slides that can progressively damage the bed protection which might lead to the failure of hydraulic structures This updated Scour Manual presents scour prediction methods and deals with practically related scour problems Consultants and contractors were invited to provide case studies of realized projects including the methods that were followed These case studies will help with grasping the concept of scour by the flow of water This manual provides the engineer with the latest knowledge and with case studies that show how to apply the formulas and their limitations

Hydraulic Fill Manual Jan van 't Hoff, Art Nooy van der Kolff, 2012-12-18 Without proper hydraulic fill and suitable specialised equipment many major infrastructure projects such as ports airports roads industrial or housing projects could not be realised Yet comprehensive information about hydraulic fill is difficult to find This thoroughly researched book written by noted experts takes the reader step by step through the complex development of a hydraulic fill project Up to date and in depth this manual will enable the client and his consultant to understand and properly plan a reclamation project It provides adequate guidelines for design and quality control and allows the contractor to work within known and generally accepted guidelines and reasonable specifications The ultimate goal is to create better designed more adequately specified and less costly hydraulic fill projects The Hydraulic Fill Manual covers a range of topics such as The development cycle of a hydraulic fill project How technical data are acquired and applied The construction methods applicable to a wide variety of equipment and soil conditions the capabilities of dredging equipment and the techniques of soil improvement How to assess the potentials of a borrow pit Essential environment assessment issues The design of the hydraulic fill mass including the boundary conditions for the design effects of the design on its surroundings the strength and stiffness of the fill mass density sensitivity to liquefaction design considerations for special fill material such as silts clays and carbonate sands problematic subsoils and natural hazards Quality control and monitoring of the fill mass and its behaviour after construction This manual is of particular interest to clients consultants planning and consenting authorities environmental advisors contractors and civil geotechnical hydraulic and coastal engineers involved in dredging and land reclamation projects

Sustainable Hydraulics in the Era of Global Change Sébastien Erpicum, Benjamin Dewals, Pierre Archambeau, Michel Piroton, 2016-12-01 In an increasingly urbanized world water systems must be designed and operated according to innovative standards in terms of climate adaptation resource efficiency sustainability and resilience This grand challenge triggers unprecedented questions for hydro environment research and engineering Shifts in paradigms are urgently needed in the way we view circular water systems water as a renewable energy production and storage risk management of floods storms sea level rise and droughts as well as their consequences on water quality morphodynamics e g reservoir sedimentation scour sustainability of deltas and the environment Addressing these issues requires a deep understanding of basic processes in fluid mechanics heat and mass transfer surface and groundwater flow among others
