StarBriefs 2001 ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

Semistructured Database Design Tok Wang Ling,Gillian Dobbie,2006-03-30 Semistructured Database Design provides an essential reference for anyone interested in the effective management of semistructured data Since many new and advanced web applications consume a huge amount of such data there is a growing need to properly design efficient databases This volume responds to that need by describing a semantically rich data model for semistructured data called Object Relationship Attribute model for Semistructured data ORA SS Focusing on this new model the book discusses problems and presents solutions for a number of topics including schema extraction the design of non redundant storage organizations for semistructured data and physical semistructured database design among others Semistructured Database Design presents researchers and professionals with the most complete and up to date research in this fast growing field Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises National Research Council,Division of Behavioral and Social Sciences and Education,Committee on Population,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Committee on the Effective Use of Data, Methodologies, and Technologies to Estimate Subnational Populations at Risk,2007-07-01 Worldwide millions of people are displaced annually because of natural or industrial disasters or social upheaval Reliable data on the numbers characteristics and locations of these populations can bolster humanitarian relief efforts and recovery programs Using sound methods for estimating population numbers and

characteristics is important for both industrialized and developing nations Ensuring that the data are geographically referenced for projection onto maps is essential However good data alone are insufficient Adequate staff training and strong organizational and political desire to maintain and use the information are also required Tools and Methods for Estimating Populations at Risk from Natural Disasters and Complex Humanitarian Crises reviews the main methods and tools for making estimates of subnational populations and makes several recommendations to improve the collection and the use of population data for emergency response and development
