Chemistry Andrew Terhemen Tyowua, 2023-03-31 Successful completion of postgraduate studies especially PhD and career advancement in academia strongly depend on the ability to publish scientific papers or books and attract research grants. However, many chemical scientists find preparing scientific papers and research grant and book proposals difficult partly because of insufficient training in writing and partly because there are few practical books to enable them to learn the art. This step by step practical guide is intended mainly for postgraduate students and early career researchers in chemical science and the libraries that serve them but will also be useful to other scientists. Key Features: Improves the reader's chances of getting their manuscript published in chemistry journals; Increases the likelihood of winning research grants in chemistry; Takes a lead by the hand approach; Contains chapters on the preparation of graphical abstracts and research highlights; Uses sketches and other illustration styles to aid mental visualization of concepts; Contains practical examples taken from published papers and successful research grant proposals.

Scientific Discourse and the Rhetoric of Globalization Carmen Pérez-Llantada, 2012-03-29 The rhetorical practices involved with the dissemination of scientific discourse are shifting. Addressing these changes, this book places the discourse of science in an increasingly multilingual and multicultural academic area. It contests monolingual assumptions informing scientific discourse, calling attention to emerging glocal discourses that make hybrids of the standard globalized and local academic English norms. English clearly has a hegemonic role as the lingua franca of global academia; this book conducts an intercultural rhetorical and textographic analysis to compare how Anglophone and non Anglophone academics utilise the standardized rhetorical conventions for scientific writing. It takes an academic literacies approach, providing a rhetorically and pedagogically informed discussion. It enquires into the process of linguistic and rhetorical acculturation of both monolingual and multilingual scholars and in doing so redefines the contemporary rhetoric of science.

Writing Science Through Critical Thinking Marilyn F. Moriarty, 1997 Written and extensively class tested with NSF/NIH support, this timely and useful text addresses a crucial need which is acknowledged in most universities and colleges: It is the need for students to learn to write in the context of their field of study, in this case science. Although numerous how-to writing books have been published, few if any address the central pedagogical issues underlying the process of learning to think and write scientifically. The direct connection between this writing skill and that of critical thinking is developed with engaging style by the author, an English professor. Moriarty's book is an invaluable guide for both undergraduate and graduate science students. In the process of learning the specific requirements of organization demanded by scientific writing, students will develop strategies for thinking through their scientific research well before they sit down to write. This instructive text will be useful to students who need to satisfy a science writing proficiency requirement in the context of a science course, a course in technical writing, advanced composition, or writing for the profession.
