Green Materials: Processing Technologies, Properties And Applications (In 4 Volumes) Kristiina Oksman,Aji P Mathew,Alexander Bismarck,Orlando Rojas,Mohini Sain,2014-04-11 Green materials and green nanotechnology have gained widespread interest over the last 15 years first in academia then in related industries in the last few years The Handbook of Green Materials serves as reference literature for undergraduates and graduates studying materials science and engineering composite materials chemical engineering bioengineering and materials physics and for researchers professional engineers

and consultants from polymer or forest industries who encounter biobased nanomaterials bionanocomposites self and direct assembled nanostructures and green composite materials in their lines of work This four volume set contains material ranging from basic background information on the fields discussed to reports on the latest research and industrial activities and finally the works by contributing authors who are prominent experts of the subjects they address in this set The four volumes comprise of The first volume explains the structure of cellulose different sources of raw material the isolation separation processes of nanomaterials from different material sources and properties and characteristics of cellulose nanofibers and nanocrystals starch nanomaterials Information on the different characterization methods and the most important properties of biobased nanomaterials are also covered The industrial point of view regarding both the processability and access of these nanomaterials as well as large scale manufacturing and their industrial application is discussed particularly in relation to the case of the paper industry The second volume expounds on different bionanocomposites based on cellulose nanofibers or nanocrystals and their preparation manufacturing processes It also provides information on different characterization methods and the most important properties of bionanocomposites as well as techniques of modeling the mechanical properties of nanocomposites This volume presents the industrial point of view regarding large scale manufacturing and their applications from the perspective of their medical uses in printed electronics and in adhesives The third volume deals with the ability of bionanomaterials to self assemble in either liquids or forming organized solid materials The chemistry of cellulose nanomaterials and chemical modifications as well as different assembling techniques and used characterization methods and the most important properties which can be achieved by self assembly are described The chapters for example discuss subjects such as ultra light biobased aerogels based on cellulose and chitin thin films suitable as barrier layers self sensing nanomaterials and membranes for water purification The fourth volume reviews green composite materials including green raw materials such as biobased carbon fibers regenerated cellulose fibers and thermoplastic and thermoset polymers e g PLA bio based polyolefines polysaccharide polymers natural rubber bio based polyurethane lignin polymer and furfuryl alcohol The most important composite processing technologies are described including prepregs of green composites compounding liquid composite molding foaming and compression molding Industrial applications especially for green transportation and the electronics industry are also described This four volume set is a must have for anyone keen to acquire knowledge on novel bionanomaterials including structure property correlations isolation and purification processes of nanofibers and nanocrystals their important characteristics processing technologies industrial up scaling and suitable industry applications The handbook is a useful reference not only for teaching activities but also for researchers who are working in this field **New Statesman Society** ,1993 *Sustainable Energy* Ahmed F. Zobaa, Sara Afifi, Ioana Pisica, 2016-12-21 The sustainable energy sources are potentially employed to substitute petrol fuels in transport engines such as buses and small vehicles Hydrogen enriched compressed natural gas engines are

forthcoming energy carriers for the internal combustion engine with higher thermal efficiency and less pollutant emissions. The different availability of renewables has allowed various countries to adopt the most appropriate type of renewable energy technology according to their energy source adequacy abundance. In Taiwan, ocean energy is considered as an abundant source of renewables due to its geographical location as an island. The Taiwanese government has approved the investment to construct an MW scale demonstration electricity plant. In this book, the Taiwanese ocean energy experience is comprehensively presented. The technical and legal analyses of ocean energy implementation are provided. The challenges that they had to overcome to optimize the utilization of the most available ocean energy potential are discussed. The sustainable transition in South Africa would be a good example for implementing rooftop solar especially in low income communities. Apart from the environmental benefits, sustainable energy technologies can boost the socioeconomic level of developing countries. Other advantages may be the continuous supply of energy and creation of new job opportunities. Moreover, sustainable renewable energy sources such as the wind could be employed for generating electricity to operate water purification systems in remote areas. This in turn would overcome the health problems associated with drinking water scarcity issues. This book is an attempt to cover the sustainable energy issues from a technical perspective. Furthermore, the sustainable energy applications and existing case studies are helpful illustrations for the broad understanding of the importance of sustainable energy.

Paratransit in African Cities Roger Behrens, Dorothy McCormick, David Mfinanga, 2015-09-07. Public transport systems in contemporary Sub-Saharan African cities are heavily reliant upon paratransit services. These services are defined as informal transportation which operates between the public and individual private spheres. In Africa, paratransit is characterized by low quality of vehicles and chaotic management but it also provides cheap, accessible and flexible transport solutions for the urban poor. It is typically poorly regulated and operates as a set of informal businesses. A common result of weak public sector regulation and a fare strategy in which owners claim a fixed daily revenue target and drivers who keep the variable balance as income is destructive competition and poor quality of service. There is an incontrovertible case for improving the quality, reliability and coverage of public transport systems and some city governments have attempted to do so by initiating reform projects that envisage the phased replacement of paratransit operations with formalised bus rapid transit systems. In this book, the authors argue that there are, however, path dependencies and constraints that limit the possible extent of public transport system reform. Paratransit operations also have some inherent advantages with respect to demand responsiveness and service innovation. Attempts to eradicate paratransit may be neither pragmatic nor strategic. Two future scenarios are likely: hybrid systems comprised of both paratransit and formally planned modes and systems improved by upgrades and strengthened regulation of existing paratransit services. The business strategies and aspirations of incumbent paratransit operators in three case cities: Cape Town, Dar es Salaam and Nairobi are discussed as well as their attitudes towards emerging public transport reform projects.

International experiences of hybrid system regulation and paratransit business development are reviewed in order to explore policy options. The authors contend that policies recognising paratransit operators and seeking contextually appropriate complementarity with formalised planned services will produce greater benefits than policies ignoring their continued existence.

Enhancing Democracy With Coalition Governments and Politics Tshishonga, Ndwakhulu Stephen, 2024-05-20 Political coalition formation is a global strategy employed by leaders and parties in their pursuit of power. This practice takes on particular significance in post colonial Africa where coalition governments have emerged as responses to challenges faced by the electoral base of liberation parties. In countries like Congo Kinshasa Zimbabwe Nigeria Mauritius South Africa and the Kingdom of Lesotho coalition politics serves as a model for conflict resolution and democratic governance. *Enhancing Democracy With Coalition Governments and Politics* delves into this complex landscape thoroughly investigating the pivotal role of coalition governments formed both before and after elections. It sheds light on the challenges posed to dominant liberation movements and the urgent need for a radical agenda to address corruption maladministration and the abuse of political power. The book focuses on Africa's pursuit of sound electoral democracy and democratic governance. *Enhancing Democracy With Coalition Governments and Politics* aims to conceptually understand coalition governments trace their historical evolution in Africa interrogate the triggers for coalition formation assess their impact on electoral democracy and explore coalition politics at both local and national levels. By providing theoretical and empirical insights the book equips policymakers practitioners scholars and researchers in the fields of Politics Sociology Public Administration and Development Studies with tools to comprehend form manage and sustain political coalitions as vehicles for democratic governance.

The Jack Bank Glen Retief, 2025-09-23 An extraordinary literary memoir from a gay white South African coming of age at the end of apartheid in the late 1970s. Glen Retief's childhood was at once recognizably ordinary and brutally unusual. Raised in the middle of a game preserve where his father worked, Retief's warm nuclear family was a preserve of its own against chaotic forces just outside its borders: a childhood friend whose uncle led a death squad while his cultured grandfather quoted Shakespeare at barbecues and abused Glen's sister in an antique filled tobacco scented living room. But it was when Retief was sent to boarding school that he was truly exposed to human cruelty and frailty. When the prefects were caught torturing younger boys they invented the jack bank where underclassmen could save beatings earn interest on their deposits and draw on them later to atone for their supposed infractions. Retief writes movingly of the complicated emotions and politics in this punitive all male world and of how he navigated them even as he began to realize that his sexuality was different than his peers.

Focus: Choral Music in Global Perspective André de Quadros, 2019-03-11 *Focus: Choral Music in Global Perspective* introduces the little known traditions and repertoires of the world's choral diversity from prison choirs in Thailand and gay and lesbian choruses of the Western world to community choruses in the Middle East and youth choirs in the United States. The book weaves together the stories of diverse individuals

and organizations examining their music and pedagogical practices while presenting the author's research on how choral cultures around the world interact with societies and transform the lives of their members. Through an engaging series of portraits that pushes beyond the scope of extant texts and studies, the author explores the dynamic realm of world choral activity and repertoire. These personal portraits of musical communities are enriched by sample repertoire lists, performance details, and research findings that reposition a once Western phenomenon as a global concept. *Focus Choral Music in Global Perspective* is an accessible, engaging, and provocative study of one of the world's most ubiquitous and socially significant forms of music making.
