passed since the inception of the United Nations Framework Convention on Climate Change UNFCCC and the beginning of policy on climate change Thirty wasted years To most politicians long term collective interest has been denominated in meaningless units of time a never and forever that has continually delayed action From complacency has come potential disaster and we are now living in a time of climate emergency and ecological breakdown The next decade is a pivotal period requiring fundamental change But numerous impediments remain Continual material energy and economic growth on a planetary scale are manifestly impossible and yet economic theory takes these as a given and political leadership and policy seem unwilling to accept brute reality Instead they offer a series of implausible commitments and pledges rooted in technofixes without addressing the fundamental drivers of the problems the world faces The edited volume explores the issues and offers a variety of ways to think through the problems at hand from postgrowth degrowth and social ecological economics to policy assemblage and transversalism The chapters in this book were originally published in the journal *Globalizations* *Physics Briefs* ,1985 *Telecommunications Research and Engineering at the Communications Technology Laboratory of the Department of Commerce* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Telecommunications Research and Engineering at the Department of Commerce's Boulder Laboratories, 2015-11-30 The Department of Commerce operates two telecommunications research laboratories located at the Department of Commerce's Boulder Colorado campus the National Telecommunications and Information Administration's NTIA's Institute for Telecommunications Sciences ITS and the National Institute of Standards and Technology's NIST's Communications Technology Laboratory CTL CTL develops appropriate measurements and standards to enable interoperable public safety communications effective and efficient spectrum use and sharing and advanced communication technologies CTL is a newly organized laboratory within NIST formed mid 2014 As it is new and its planned work represents a departure from that carried out by the elements of which it was composed this study focuses on its available resources and future plans rather than past work The Boulder telecommunications laboratories currently play an important role in the economic vitality of the country and can play an even greater role given the importance of access to spectrum and spectrum sharing to the wireless networking and mobile cellular industries Research advances are needed to ensure the continued evolution and enhancement of the connected world the public has come to expect **Freedom's Laboratory** Audra J. Wolfe, 2020-08-04 The Cold War ended long ago but the language of science and freedom continues to shape public debates over the relationship between science and politics in the United States Scientists like to proclaim that science knows no borders Scientific researchers follow the evidence where it leads their conclusions free of prejudice or ideology But is that really the case In Freedom's Laboratory Audra J Wolfe shows how these ideas were tested to their limits in the high stakes propaganda battles of the Cold War Wolfe examines the role that scientists in concert with administrators and policymakers played in American cultural diplomacy after World War II

During this period the engines of US propaganda promoted a vision of science that highlighted empiricism objectivity a commitment to pure research and internationalism Working both overtly and covertly wittingly and unwittingly with governmental and private organizations scientists attempted to decide what exactly they meant when they referred to scientific freedom or the US ideology More frequently however they defined American science merely as the opposite of Communist science Uncovering many startling episodes of the close relationship between the US government and private scientific groups Freedom s Laboratory is the first work to explore science s link to US propaganda and psychological warfare campaigns during the Cold War Closing in the present day with a discussion of the 2017 March for Science and the prospects for science and science diplomacy in the Trump era the book demonstrates the continued hold of Cold War thinking on ideas about science and politics in the United States

Automated Reasoning for Systems Biology and Medicine Pietro Liò, Paolo Zuliani, 2019-06-11 This book presents outstanding contributions in an exciting new and multidisciplinary research area the application of formal automated reasoning techniques to analyse complex models in systems biology and systems medicine Automated reasoning is a field of computer science devoted to the development of algorithms that yield trustworthy answers providing a basis of sound logical reasoning For example in the semiconductor industry formal verification is instrumental to ensuring that chip designs are free of defects or bugs Over the past 15 years systems biology and systems medicine have been introduced in an attempt to understand the enormous complexity of life from a computational point of view This has generated a wealth of new knowledge in the form of computational models whose staggering complexity makes manual analysis methods infeasible Sound trusted and automated means of analysing the models are thus required in order to be able to trust their conclusions Above all this is crucial to engineering safe biomedical devices and to reducing our reliance on wet lab experiments and clinical trials which will in turn produce lower economic and societal costs Some examples of the questions addressed here include Can we automatically adjust medications for patients with multiple chronic conditions Can we verify that an artificial pancreas system delivers insulin in a way that ensures Type 1 diabetic patients never suffer from hyperglycaemia or hypoglycaemia And lastly can we predict what kind of mutations a cancer cell is likely to undergo This book brings together leading researchers from a number of highly interdisciplinary areas including Parameter inference from time series Model selection Network structure identification Machine learning Systems medicine Hypothesis

generation from experimental data Systems biology systems medicine and digital pathology Verification of biomedical devices This book presents a comprehensive spectrum of model focused analysis techniques for biological systems an essential resource for tracking the developments of a fast moving field that promises to revolutionize biology and medicine by the automated analysis of models and data Prof Luca Cardelli FRS University of Oxford
