HOMWORK FOR LAB 3: FORCE AND MOTION

1. You are given 10 identical springs. Describe how you would develop a scale of force (i.e., a means of producing repeatable forces of a variety of sizes) using these springs. First, arrange Springs in various combinations: 3 scenarios for this:

For Part 2, use their data as first 10 displacements from the zero configuration.

- 1) Series - Springs connected in series
- 2) Parallel - Springs are connected in parallel
- 3) mixed - Combination of series and parallel

2. Describe how you would use an uncalibrated force probe and the springs in Question 1 to develop a quantitative scale of force. How could you measure forces that do not correspond to exact numbers of stretched springs?

The Spring scale and the balance both measure the weight of an object. The balance measures the weight of an unknown object with that of a standard weight. The Spring scale compares the displacement of the spring with the force needed to extend the spring. It is based on Hooke's Law ($F = kx$) showing that the force is proportional to the displacement on a spring constant k .

3. What is meant by a proportional relationship? Is this the same as a linear relationship? Explain.

A proportional relationship is a relationship between 2 variables where their ratios are equivalent.

4. Given the table of data below for widgets and doodads, how would you determine if the relationship between widgets and doodads is a proportional one? Sketch on the axes to the right of the table what the graph would look like if widgets are proportional to doodads.

Yes, the relationship between doodads & widgets is proportional because it passes through the origin (widgets (40) & doodads (0,0))

Widgets	Doodads
0.0	0.0
150.5	10.0
300.0	20.0
442.7	30.0
601.3	40.0
