of computing with constraints including algorithms applications environments languages models and systems This year we received 164 submissions All of the submitted papers received atleastthreereviews andthepapersandtheirreviewswerethenextensivelydiscussed during an online Program Committee meeting As a result the Program Committee chose 48 29 3% papers to be published in full in the proceedings and a further 22 13 4% papers to be published as short papers The full papers were presented at the conference in two parallel tracks and the short papers were presented as posters during a lively evening session Two papers were selected by a subcommittee of the Program Committee consisting of Chris Beck Gilles Pesant and myself to receive best paper awards The conference program also included excellent invited talks by Hector Ge ner Ian Horrocks Francesca Rossi and Peter J Stuckey As a permanent record the proceedings contain four page extended abstracts of the invited talks

Advances in Data-driven Computing and Intelligent Systems Jagdish Chand Bansal, Snehanishu Saha, Carlos A. Coello Coello, Hemant Rathore, 2025-07-26 This book is a collection of best selected research papers presented at the International Conference on Advances in Data driven Computing and Intelligent Systems ADCIS 2024 held at BITS Pilani K K Birla Goa Campus Goa India during September 20 21 2024 It includes state of the art research work in the cutting edge technologies in the field of data science and intelligent systems The book presents data driven computing it is a new field of computational analysis which uses provided data to directly produce predictive outcomes The book is useful for academicians research scholars and industry persons

Neutrosophic Graph Theory and Algorithms Smarandache, Florentin, Broumi, Said, 2019-10-25 Graph theory is a specific concept that has numerous applications throughout many industries Despite the advancement of this technique graph theory can still yield ambiguous and imprecise results In order to cut down on these indeterminate factors neutrosophic logic has emerged as an applicable solution that is gaining significant attention in solving many real life decision making problems that involve uncertainty impreciseness vagueness incompleteness inconsistency and indeterminacy However empirical research on this specific graph set is lacking Neutrosophic Graph Theory and Algorithms is a collection of innovative research on the methods and applications of neutrosophic sets and logic within various fields including systems analysis economics and transportation While highlighting topics including linear programming decision making methods and homomorphism this book is ideally designed for programmers researchers data scientists mathematicians designers educators researchers academicians and students seeking current research on the various methods and applications of graph theory

Higher Engineering Mathematics N.B. Singh, Higher Engineering Mathematics is a comprehensive textbook designed to provide students and professionals with a solid foundation in advanced mathematical techniques essential for engineering and applied sciences The book covers a wide range of topics including differential equations Fourier series Laplace transforms and complex analysis with a focus on practical applications Each chapter introduces key concepts in a clear and approachable manner supported by worked examples and problems that demonstrate how these mathematical tools are used to solve real world

engineering problems Through step by step explanations and illustrative examples this book ensures that complex mathematical ideas are accessible and understandable for readers at all levels
