Concurrent, Real-Time and Distributed Programming in Java Badr Benmammar,2017-12-27 This book provides an introduction to concurrent real time distributed programming with Java object oriented language support as an algorithm description tool It describes in particular the mechanisms of synchronization cooperative and competitive and sharing of data internal class static variables between threads in Java He then discusses the use of Java for real time applications Consequently a presentation of the RTSJ Real Time Specification for

Java specification dedicated to the development of real time applications in Java is also introduced in this book Finally a presentation of programming distributed in Java is presented in this book We are particularly interested in communication using the TCP Sockets and high level communication using Java Remote Method Invocation RMI The book also contains an annex which contains a practical set of application exercises in relation to the theme of the book Knowledge of the Java language is a prerequisite for understanding the book

Distributed, Embedded and Real-time Java Systems M. Teresa Higuera-Toledano, Andy J. Wellings, 2012-02-07 Research on real time Java technology has been prolific over the past decade leading to a large number of corresponding hardware and software solutions and frameworks for distributed and embedded real time Java systems This book is aimed primarily at researchers in real time embedded systems particularly those who wish to understand the current state of the art in using Java in this domain Much of the work in real time distributed embedded and real time Java has focused on the Real time Specification for Java RTSJ as the underlying base technology and consequently many of the Chapters in this book address issues with or solve problems using this framework Describes innovative techniques in scheduling memory management quality of service and communication systems supporting real time Java applications Includes coverage of multiprocessor embedded systems and parallel programming Discusses state of the art resource management for embedded systems including Java s real time garbage collection and parallel collectors Considers hardware support for the execution of Java programs including how programs can interact with functional accelerators Includes coverage of Safety Critical Java for development of safety critical embedded systems

Experiments with Sun Java Real-Time System M. Auguston, T. S. Cook, D. Drusinsky, J. B. Michael, T. W. Otani, M. Shing, Naval Postgraduate School (U.S.), United States. Missile Defense Agency, 2007 This is our second report on the Sun Java Real Time System RTS experiments In this report we describe the findings on RTS 2.0 beta release that includes the real time garbage collector RTGC We performed a number of experiments to determine whether the availability of RTGC will result in a better software architecture for the Global Integrated Fire Control System GIFC a component of the C2BMC element of the Ballistic Missile Defense System BMDS Our experiment shows that it is possible to use only the Real Time Java threads that use the heap memory for the GIFC software SUN RTJ 2.0 gives programmers more control over the priority of the garbage collection We developed a real time monitor design pattern to support the implementation of time constrained computations that use the heap memory and a methodology to determine the RTS run time parameters thread priorities memory usage process load and task deadlines necessary for the timely execution of these time constrained computations

Real-time Programming in Java, 2000 **Declarative real-time concurrent programming in Java** Marc Alfons Terrones Carratalà, 2006 Java, Late Objects Version Paul J. Deitel, Harvey M. Deitel, 2010 The Deitels groundbreaking How to Program series offers unparalleled breadth and depth of object oriented programming concepts and intermediate level topics for further study This survey of Java programming contains an optional extensive OOD UML 2 case study on developing and implementing the software for an automated teller machine The Eighth Edition of this acclaimed text is now current with the Java SE 6 updates that have occurred since the book was last published The Late Objects Version delays coverage of class development until Chapter 8 presenting the control structures methods and arrays material in a non object oriented procedural programming context

A Developer's Approach to Learning Java Carol Wellington, 2017-07-14 This book is designed to teach beginners how to program in Java Beyond teaching the basics of Java it focuses on how to use state of the art techniques to solve real world problems Readers will gain expertise by following a progression of practical examples that lead the reader through three distinct phases Phase 1 explains how to read Java code The reader watches code execute in the Eclipse debugger and learns to predict the behavior that various Java constructs cause Phase 2 introduces JUnit tests to practice writing code using the primary Java constructs Phase 3 progresses to real world problem solving using test driven development TDD Written with a friendly tone this book covers the normal introductory programming material with a unique approach Concepts are presented in a progressively detailed format Readers will quickly be able to understand complete basic Java programs Later as they learn more complex details they will re visit coding topics applying the more advanced concepts to building new more advanced programs Each chapter contains a lab that not only reinforces the material but also develops the reader's ability to think independently and

use development tools in the same way that developers working in the software industry use them *Experiments with Sun Java Real-Time System - Part II* ,2007 This is our second report on the Sun Java Real Time System RTS experiments In this report we describe the findings on RTS 2 0 beta release that includes the real time garbage collector RTGC We performed a number of experiments to determine whether the availability of RTGC will result in a better software architecture for the Global Integrated Fire Control System GIFC a component of the C2BMC element of the Ballistic Missile Defense System BMDS Our experiment shows that it is possible to use only the Real Time Java threads that use the heap memory for the GIFC software SUN RTJ 2 0 gives programmers more control over the priority of the garbage collection We developed a real time monitor design pattern to support the implementation of time constrained computations that use the heap memory and a methodology to determine the RTS run time parameters thread priorities memory usage process load and task deadlines necessary for the timely execution of these time constrained computations
