I would like to express my gratitude to Professor Collins and Jane Arden (Lab Technician at XYZ State University) for their guidance, academic encouragement, and friendly critique. Their attitude and care have helped me to complete this research project on time. I would also like to thank Dr. King for her advice and cooperation as she helped me to access information from relevant university departments. The contribution of Mr. Bean to this project cannot be underestimated as his humor and analytical work have helped me to calculate the financial part and estimate available resources.

I would also like to extend my thanks to XYZ Systems for their tuning of the technical equipment and their skills in running the XYZ systems.

Finally, I would like to thank my family for their support and care throughout my research work.

Advanced x-ray multilayer waveguide optics Qi Zhong,2017 The aim of this thesis was to design novel waveguide structures and to analyze them in view of complex phenomena of near field propagation For this purpose experimental far field measurements were used in combination with finite difference simulations and phase retrieval methods Two novel structures have been designed fabricated and characterized the waveguide array WGA yielding several waveguided beams in transmission and multi guide resonate beam couplers RBCs tailored to yield two or several reflected beams Two novel structures have been designed fabricated and characterized the WGA yielding several waveguided beams in transmission and multi guide RBCs tailored to yield two or several reflected beams The WGA and the multi guide RBCs are not only distinct in the coupling geometry A major difference is related to the fact that the WGA principle is based on the separation non coupling of the different transmitted wavelets while the RBC functions are based on a strong coupling of guided radiation in several layers
