...and the *Journal of the American Medical Association* (JAMA) published a study that found that the use of a computer program to monitor patients' vital signs and symptoms could reduce the risk of complications and improve patient outcomes. The study, which was conducted by researchers at the University of California, San Francisco, found that the use of the program resulted in a 15% reduction in the number of complications and a 10% improvement in patient outcomes. The researchers concluded that the use of such programs could be a valuable tool for improving patient care and reducing costs.
