The Scientific Context for Exploration of the Moon National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Scientific Context for Exploration of the Moon, 2006-09-19 Because of the Moon's unique place in the evolution of rocky worlds it is a prime focus of NASA's space exploration vision. Currently NASA is defining and implementing a series of robotic orbital and landed missions to the Moon as the initial phase of this vision. To realize the benefits of this activity NASA needs a comprehensive well validated and prioritized set of scientific research objectives. To help establish those objectives NASA asked the NRC to provide guidance on the scientific challenges and opportunities enabled by sustained robotic and human exploration of the Moon during the period 2008-2013. This interim report which focuses on science of the Moon presents a number of scientific themes describing broad scientific goals important for lunar research discussions of how best to reach these goals, a set of three priority areas that follow from the themes and recommendations for these priorities and related areas. A final report will follow in the summer of 2007.

TEACHING OF BIOLOGICAL SCIENCES (Intended for Teaching of Life Sciences, Physics, Chemistry and General Science) AHMAD, JASIM, 2011-11-30 Students of today especially at the school level perceive science as a collection of facts to be memorized whereas in reality it is constantly changing as new information accumulates and new techniques develop every day. The objective of teaching is not restricted to imparting scientific information to students but also to help them apply these principles in their daily lives. This comprehensive book written in an easy to understand language covers the entire syllabus of teaching of Biological Sciences in particular and Science Teaching in general. In so doing it takes into account the needs of teacher trainees and in-service teachers. Organized into 20 chapters the book discusses in detail the many facets and aspects of Biology Science Teaching. The text introduces modern approaches to teaching with the aim of improving student learning throughout their course. It emphasizes the need for pedagogical analysis vis-à-vis subject teaching, constructive approach, laboratory work, Continuous and Comprehensive Evaluation (CCE). In addition the text highlights the difference between microteaching and simulated teaching. It also shows how e-learning and co-curricular activities can be successfully integrated in biological sciences teaching. **NEW TO THIS EDITION** Inclusion of one chapter on Concept Mapping in Biology Teaching. This chapter advocates the popularized constructivist approach of teaching learning process. Besides some figures, tables and flow charts are also added to make the book more useful to the readers. **KEY FEATURES** Analyses Constructivism versus Behaviourism. Includes self-explanatory model lesson plan. Discusses Information and Communication Technology (ICT) in the context of Biology Science teaching learning. Suggests how apparatus and devices can be secured and cultured and used in classroom demonstrations and student projects. Primarily intended as a text for students of B Ed pursuing course on Teaching of Biological Sciences. Life Sciences the book should prove equally useful for B Ed students following courses on Teaching of Physical Sciences. In addition diploma students of Elementary Teacher Education (ETE).

having a paper on Teaching of EVS General Science and M Ed and M A Education students with an optional elective paper on Science Education would find the book extremely useful **Principles of Environmental Sciences** Jan J. Boersema, Lucas Reijnders, 2008-12-12 International experts provide a comprehensive picture of the principles concepts and methods that are applicable to problems originating from the interaction between the living non living environment and mankind Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed Disciplinary approaches are discussed but there is a focus on multi and interdisciplinary methods A large number of practical examples and case studies are presented There is special emphasis on modelling and integrated assessment This book is different because it stresses the societal cultural and historical dimensions of environmental problems The main objective is to improve the ability to analyse and conceptualise environmental problems in context and to make readers aware of the value and scope of different methods Ideal as a course text for students this book will also be of interest to researchers and consultants in the environmental sciences Measuring and Modeling Health Care Costs Ana

Aizcorbe, Colin Baker, Ernst R. Berndt, David M. Cutler, 2018-03-05 Health care costs represent a nearly 18% of U S gross domestic product and 20% of government spending While there is detailed information on where these health care dollars are spent there is much less evidence on how this spending affects health The research in Measuring and Modeling Health Care Costs seeks to connect our knowledge of expenditures with what we are able to measure of results probing questions of methodology changes in the pharmaceutical industry and the shifting landscape of physician practice The research in this volume investigates for example obesity s effect on health care spending the effect of generic pharmaceutical releases on the market and the disparity between disease based and population based spending measures This vast and varied volume applies a range of economic tools to the analysis of health care and health outcomes Practical and descriptive this new volume in the Studies in Income and Wealth series is full of insights relevant to health policy students and specialists alike
